PROGRAMME SCHEME	6-70

INTRODCUTION

Dive into the dynamic world of the MCA in Cybersecurity, where hands-on learning reflects real-world cyber threats and defense strategies. Explore a wide range of cutting-edge cybersecurity specializations, ensuring your expertise aligns with the rapidly evolving field of information security.

PROGRAMME OUTCOMES

Programme outcomes are concise statements outlining what students will know and be able to do upon completing the MCA in Cybersecurity. These encompass the skills, knowledge and behaviors students develop throughout the program.

1. **Analysis & Design of Complex Cybersecurity Problems:** Apply computer science and cybersecurity knowledge to identify, analyze and resolve complex security challenges effectively.
2. **Coding Skills for Security Solutions:** Utilize secure coding practices and programming tools to develop robust solutions for cybersecurity challenges.
3. **Ethics in Cybersecurity:** Adhere to ethical principles, ensuring professional responsibility to safeguard data and systems for societal benefit.
4. **Effective Communication:** Clearly articulate cybersecurity issues, produce detailed reports and deliver presentations to share and comprehend instructions seamlessly.
5. **Societal Impact:** Acquire and apply advanced cybersecurity knowledge to foster secure and sustainable digital ecosystems.
6. **Individual and Teamwork:** Excel as an individual contributor or collaborate effectively as a member or leader in diverse cybersecurity teams.
7. **Life-long Learning:** Stay proactive in continuous learning to adapt to emerging cybersecurity threats and technological advancements.

PROGRAMME SPECIFIC OUTCOMES

PSOs outline what graduates of the MCA in Cybersecurity program should be able to achieve, with a focus on cybersecurity:

1. **PSO1:** Master advanced concepts in secure programming, data structures, database security, network security, mobile computing security, information security and data analysis to protect digital environments.
2. **PSO2:** Demonstrate expertise in using computational tools to simulate and secure digital systems against cyber threats and vulnerabilities.
3. **PSO3:** Apply cybersecurity principles to analyze, design and develop cost-effective solutions

to address societal cybersecurity challenges.

4. **PSO4:** Create user-friendly, need-based mobile, web or cloud-based cybersecurity solutions to safeguard societal digital infrastructure.
5. **PSO5:** Leverage computational tools to implement machine learning/artificial intelligence (ML/AI) techniques for advanced cyber threat detection and prevention.
6. **PSO6:** Utilize cybersecurity knowledge to design and implement secure network architectures and protocols to ensure robust data protection.
7. **PSO7:** Employ computational tools to simulate cyber threats, assess system vulnerabilities, and develop effective defence mechanisms to mitigate risks.

SALIENT FEATURES

- **Virtual Industry Interactions:** Engage in online expert sessions, virtual industry talks and live case studies to explore Cyber Security, identify real-world challenges and learn cutting-edge immersive technologies.
- **Industry-Relevant Trainings:** Equip students with Cyber Security skills to meet industry demands in immersive technology sectors.
- **Holistic Development:** Foster well-rounded growth through participation in sports, cultural activities and professional enhancement initiations.
- **Project Driven Learning:** Learning via real life projects to gain experiential learning on Cyber Security practices.
- **Professional Enhancement:** Offer Courses that help in enhancing professional skill sets and learning industry's ethical practices.
- **Contemporary Curriculum:** Deliver in-depth knowledge in critical cybersecurity domains including secure programming, database security, web application security and mobile app protection.

PROGRAMMECODE: DE16B4

DURATION OF THEPROGRAMME:

Minimum Duration 2 years

Maximum Duration 4 years

MEDIUM OF INSTRUCTION/EXAMINATION:

Medium of instruction and Examination shall be English.

**PROGRAMME STRUCTURE
MCA – CYBER SECURITY**

Term	Core Courses (CR I, CR II, CR III) CR I+II – (8+4) 12 x 4 Credits CR III - 2x 4 Credits	Discipline Specific Electives (DSE) 4 x 4 Credits	Skill Enhancement Courses (SEC) 4 x 4 Credits	Generic Electives (GE) 4 x 4 Credits	Credits
I	Discipline Specific Core- I Discipline Specific Core- II Discipline Specific Core- III Discipline Specific Core- IV Discipline Specific Core- V		SEC- I		24
II	Discipline Specific Core- VI Discipline Specific Core-VII Discipline Specific Core- VIII Discipline Specific Core- IX Discipline Specific Core- X Discipline Specific Core- XI		SEC- II		28
III	Discipline Specific Core- XII CR III – Seminar on Summer Training OR Course from the GE basket 1 which is not chosen as Generic Elective (GE).	DSE- I DSE- II	SEC-III	GE-I GE- II (Finance, General Management, Marketing)	28
IV	CR III - Project Work	DSE- III DSE-IV	SEC-IV	GE-III GE- IV (Finance, General Management, Marketing)	24
Total	56 Credits	16 Credits	16 Credits	16 Credits	104

**PROGRAMME SCHEME
MCA - CYBER SECURITY**

COURSE CODE	COURSE TITLE	Cr.	CA	ETE (Theory)	ETE (Practical)
TERM 1					
DECAP437	SOFTWARE ENGINEERING PRACTICES	4	30	70	0
DECAP444	OBJECT ORIENTED PROGRAMMING USING C++	4	30	40	30
DECAP446	DATA WAREHOUSING AND DATA MINING	4	30	70	0
DECAP448	LINUX AND SHELL SCRIPTING	4	30	40	30
DECAP453	DATA COMMUNICATION AND NETWORKING	4	30	70	0
SEC-I	SKILL ENHANCEMENT COURSE I	4	30	70	0
DECAP012	FUNDAMENTALS OF COMPUTER AND C PROGRAMMING	S/U	BRIDGE COURSE#		
DEMT006	ELEMENTARY MATHEMATICS	S/U	BRIDGE COURSE#		
#Bridge courses are applicable only to candidates having no Computers or Mathematics background. Further details are provided on Page 8.					
TERM 2					
DECAP615	PROGRAMMING IN JAVA	4	30	40	30
DECAP770	ADVANCED DATA STRUCTURES	4	30	40	30
DECAP456	INTRODUCTION TO BIG DATA	4	30	40	30
DECAP470	CLOUD COMPUTING	4	30	70	0
DEMT403	MATHEMATICAL FOUNDATION FOR COMPUTER SCIENCE	4	30	70	0
DECAP472	WEB TECHNOLOGIES	4	30	40	30
SEC-II	SKILL ENHANCEMENT COURSE II	4	30	70	0
TERM 3					
DECAP776	PROGRAMMING IN PYTHON	4	30	40	30
SEC-III	SKILL ENHANCEMENT COURSE III	4	30	40	30
DECAP660	NETWORK ADMINISTRATION	4	30	40	30
DECAP796	CYBER FORENSIC	4	30	40	30
GE-I	GENERIC ELECTIVE I	4	30	70	0
GE-II	GENERIC ELECTIVE II	4	30	70	0
DECAP735	SEMINAR ON SUMMER TRAINING OR 1 Course from the GE basket 1 which is not chosen as Generic Elective (GE).	4	30	0	70
	30		70	0	
SEC-IV	SKILL ENHANCEMENT COURSE IV	4	30	70	0
DECAP661	SECURING NETWORKS AND IT INFRASTRUCTURE	4	30	40	30
DECAP662	VULNERABILITY ASSESSMENT AND PENETRATION TESTING	4	30	40	30
GE-III	GENERIC ELECTIVE III	4	30	70	0
GE-IV	GENERIC ELECTIVE IV	4	30	70	0
DECAP788	PROJECT WORK	4	30	0	70
TOTAL CREDITS			104		

SKILL ENHANCEMENT COURSES (SEC) BASKET								
SR. NO.	COURSE CODE	COURSE TITLE	Cr.	CA	ETE (Theory)	ETE (Practical)	AREA	TERM
1	DEPEA515	ANALYTICAL SKILLS-I	4	30	70	0	PROFESSIONAL ENHANCEMENT	1
2	DEPEA516	ANALYTICAL SKILLS-II	4	30	70	0	PROFESSIONAL ENHANCEMENT	2
3	DECAP538	ALGORITHM DESIGN AND ANALYSIS	4	30	40	30	COMPUTER APPLICATION	3
4	DECAP951	SOFTWARE PROJECT MANAGEMENT	4	30	70	0	COMPUTER APPLICATION	4

GENERIC ELECTIVE (GE) BASKET 1								
SR. No.	COURSE CODE	COURSE TITLE	Cr.	CA	ETE (Theory)	ETE (Practical)	ELECTIVE AREA	TERM
1	DEMG581	ORGANIZATIONAL BEHAVIOUR AND HUMAN RESOURCE DYNAMICS	4	30	70	0	GENERAL MANAGEMENT	3
2	DEMKT503	MARKETING MANAGEMENT	4	30	70	0	MARKETING	3
3	DEFIN542	CORPORATE FINANCE	4	30	70	0	FINANCE	3

GENERIC ELECTIVE (GE) BASKET 2								
SR. No.	COURSE CODE	COURSE TITLE	Cr.	CA	ETE (Theory)	ETE (Practical)	ELECTIVE AREA	TERM
1	DEMG578	INTERNATIONAL BUSINESS ENVIRONMENT	4	30	70	0	GENERAL MANAGEMENT	3
2	DEMKT509	CONSUMER BEHAVIOUR	4	30	70	0	MARKETING	3
3	DEFIN548	INTERNATIONAL FINANCIAL MANAGEMENT	4	30	70	0	FINANCE	3

GENERIC ELECTIVE (GE) BASKET 3								
SR. No.	COURSE CODE	COURSE TITLE	Cr.	CA	ETE (Theory)	ETE (Practical)	ELECTIVE AREA	TERM
1	DEMG801	BUSINESS ANALYTICS	4	30	70	0	GENERAL MANAGEMENT	4
2	DEMKT505	DIGITAL AND SOCIAL MEDIA MARKETING	4	30	70	0	MARKETING	4
3	DEFIN508	INTERNATIONAL BANKING AND FOREX MANAGEMENT	4	30	70	0	FINANCE	4

GENERIC ELECTIVE (GE) BASKET 4								
SR. No.	COURSE CODE	COURSE TITLE	Cr.	CA	ETE (Theory)	ETE (Practical)	ELECTIVE AREA	TERM
1	DEOPR639	OPERATIONS MANAGEMENT AND RESEARCH	4	30	70	0	GENERAL MANAGEMENT	4
2	DEMKT517	CUSTOMER RELATIONSHIP MANAGEMENT	4	30	70	0	MARKETING	4
3	DEFIN576	SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT	4	30	70	0	FINANCE	4

Note:

1. Students can opt only one area from discipline specific elective basket that will be applicable for the whole program.
2. Students can opt only one area from generic elective basket that will be applicable for the whole program.
3. In case of Seminar on Summer Training, student may choose one Course from the GE basket 1 which is not chosen as Generic Elective (GE).
4. S and U grades are awarded only in case of courses with Zero credit: S for Satisfactory performance and U for Unsatisfactory performance in a course.
5. **For candidates having no Computers or Mathematics* background, Bridge course(s) will be applicable in 1st Term as per following details:**
 - **No Mathematics background:** 01 Mathematics Bridge course DEMTH006 is applicable
 - **No Computers background:** 01 Computers Bridge course DECAP012 is applicable
 - **No Mathematics and No Computers background:** 01 Mathematics course DEMTH006 and 01 Computer course DECAP012 are applicable

*Mathematics/ Statistics/ QT/ Business Mathematics

Course code	DECAP437	Course Title	SOFTWARE ENGINEERING PRACTICES	
			WEIGHTAGES	
			CA	ETE(Th.)
			30	70

Course Outcomes: Through this course, students will be able to

C01: apply theoretical foundation of software engineering in practical software development

C02: analyze the need of software maintenance activities

C03: discuss the software life cycle models

C04: apply software engineering practices to create complex software designs

C05: identify the importance of the software development process

Unit No.	Content
Unit 1	Introduction to software engineering: define software engineering, software process, software engineering practices
Unit 2	Software process models: software development life cycle (SDLC), classical software development lifecycle model, prototyping model, V model, incremental Model, introduction to agile method of software development
Unit 3	Requirement engineering: requirement engineering, requirement eliciting/gathering, negotiating requirement, validating requirement, requirement analysis, stakeholder analysis
Unit 4	Requirement specification: software requirement specification document, characteristics of a good SRS, functional and non-functional requirement
Unit 5	Design: design process, design concepts, coupling, cohesion, data flow diagram (DFD), flow chart, architectural design, component-based design, object-oriented design, class-based components, use case diagram, class diagram, activity diagram
Unit 6	User interface design: golden rules, interface design models, interface design process, interface design activities
Unit 7	Standards: good coding practices, coding standards, code reusability, documentation, documentation standards
Unit 8	Software testing: test design, test planning, test case definition, test case template
Unit 9	Testing strategies: black box testing, white box testing, sanity testing, smoke testing
Unit 10	Testing levels: unit testing, integration testing, system testing, acceptance testing, regression testing
Unit 11	Bugs: bug/defect definition, bugs life cycle, bug tracking, bug tracking tool (bugzilla overview)
Unit 12	Software maintenance: software maintenance, software supportability, reengineering, business process reengineering, software reengineering, restructuring, economics of reengineering
Unit 13	Product metrics: measure, metrics and indicators, measurement principles, function-based metrics, metrics for specification quality
Unit 14	Software process improvement: approaches to SPI, maturity models, SPI process

READINGS:

1. FUNDAMENTALS OF SOFTWARE ENGINEERING by RAJIB MALL, PHI LEARNING
2. AN INTEGRATED APPROACH TO SOFTWARE ENGINEERING by PANKAJ JALOTE, NAROSA PUBLISHING HOUSE

Course code	DECAP444	Course Title	OBJECT-ORIENTED PROGRAMMING USING C++
--------------------	-----------------	---------------------	--

WEIGHTAGES		
CA	ETE(Th.)	ETE (Pr.)
30	70	30

Course Outcomes: Through this course, students will be able to

C01: understand the concepts of Object-oriented programming

C02: distinguish between the procedure-oriented and object-oriented programming languages

C03: apply the concept of file handling and exception handling mechanisms

C04: develop applications using the concepts of Object-oriented programming

C05: validate the code formulation by passing various test cases

Unit No.	Contents
Unit 1	Principles of OOPs and basics of C++: Basic Concepts of Object Oriented Programming, Object Oriented Languages, Benefits of OOP's Specifying Class, Access specifier, Defining member functions, Nesting of member functions, Private member functions, Arrays within class
Unit 2	Constructors and Destructors: Constructors, Parameterized constructors, Copy Constructor and Dynamic Constructor, Multiple Constructor in a Class, Constructors with Default Arguments, Dynamic Initialization of Objects, Destructors
Unit 3	Functions and Compile Time Polymorphism: Call by Value & Call by Reference, Objects as function arguments, Inline Functions, Making outside function inline, Friend functions, Static Data Members & Functions, Function Overloading
Unit 4	Inheritance: Defining Derived Classes, Single Inheritance, Making a Private Member Inheritable, Multilevel Inheritance, Hierarchical Inheritance, Multiple Inheritance, Hybrid Inheritance
Unit 5	Operator Overloading: Rules for operator overloading, Overloading unary operators, Overloading binary operators, Overloading binary operators using Friend Function
Unit 6	Type Conversion: Type conversions: Basic to Class Type, Class to Basic Type, One Class to Another Class Type
Unit 7	Run-time Polymorphism: Virtual Base Classes, Abstract Classes, Pointer to Object, This Pointer, Pointer to Derived Class
Unit 8	Virtual Functions: Virtual Function, Pure Virtual Function, Early Vs Late Binding
Unit 9	Working with Streams and Files: C++ Streams, C++ Stream Classes, Classes for File Stream Operation, Opening & Closing Files, Detection of End of File
Unit 10	More on Files: More about Open(): File modes, File pointer & manipulator, Sequential Input & output Operation, Updating a File : Random Access, Command Line Arguments
Unit 11	Generic Programming with Templates: Need of Template, Class Template, Function Template, Overloading of Function Template
Unit 12	More on Templates: Recursion with Template Function, Class Template and Inheritance, Difference between Templates and Macros
Unit 13	Exception Handling: Principles of Exception Handling, Exception Handling Mechanism, Multiple Catch Statements, Catching Multiple Exceptions
Unit 14	More on Exception Handling: Re-throwing Exceptions, Exceptions in Constructors and Destructors, Controlling Uncaught Exceptions

LABORATORY WORK:

IMPLEMENTATION OF C++ PROGRAMMING CONCEPTS (CLASSES AND OBJECTS, CONSTRUCTOR AND DESTRUCTORS, FUNCTION OVERLOADING AND OPERATOR OVERLOADING, INHERITANCE, WORKING WITH FILES, TEMPLATES AND EXCEPTION HANDLING)

READINGS:

1. OBJECT ORIENTED PROGRAMMING WITH ANSI & TRUBO C++ by ASHOK N. KAMTHANE, PERASON EDUCATION
2. OBJECT ORIENTED PROGRAMMING IN C++ by ROBERT LAFORE, GALGOTIA PUBLICATIONS
3. THE C++ PROGRAMMING LANGUAGE by BJARNE STROUSTRUP, PEARSON

Course code	DECAP446	Course Title	DATA WAREHOUSING AND DATA MINING
			WEIGHTAGES
			CA
			ETE(Th.)
			30
			70

Course Outcomes: Through this course, students will be able to

C01: understand the various concepts of data warehousing like metadata, data mart, summary table, fact data and dimension data.

C02: sail along with the various approaches in data mining.

C03: familiarize with the various data ware housing and data mining tools.

C04: observe the various methods to extract knowledge using data mining techniques

C05: evaluate current trends in data mining such as web mining, spatial-temporal mining.

C06: apply different data mining methodologies with information systems.

C07: research of database systems and able to improve the decision-making process.

Unit No.	Contents
Unit 1	Data Warehousing and Online Analytical Processing: Basic concepts, Data Warehouse Modeling: Data Cube and OLAP, Data Warehouse Design and Usage, Data Warehouse Implementation
Unit 2	Introduction to data mining: Basic concepts of data mining, Different types of data repositories, Data mining functionalities, Concept of interesting patterns, Data mining tasks, Current trends, Major issues and ethics in data mining
Unit 3	Data Warehousing Architecture: Operational Data and Data store, Load Manager, Warehouse Manager, Query Manager, Detailed Data, Lightly and highly summarized Data, Archive/Backup Data, Meta-Data, architecture model, 2-tier, 3-tier and 4-tier data warehouse, End user Access tools.
Unit 4	Installation and development environment overview: Downloading and installing Rapid miner and WEKA tool from source websites, Installing Rapid miner and WEKA tool on your windows computer
Unit 5	Introduction to mining tools: Introduction to Rapid miner, Introduction to WEKA tool, features of tools, Comparison between Rapid Miner and WEKA, Overview of interface.
Unit 6	Extracting Data Sets: Importing data into Rapid miner using different formats of files, Storing and retrieving data using rapid miner, Graphical representation of data in rapid miner, Hands on practice problems on data import/export
Unit 7	Data Preprocessing: Data cleaning, Data integration and transformation, Data reduction, Discretization and concept hierarchy generation
Unit 8	Data Pre-processing using rapid miner: Identification and removal of duplicates, Apply operations for handling Meta data like rename or attribute role definition, Identify and remove the missing values in the data set, Apriori method for finding frequent item set WEKA / Rapid miner tool, Apply data mining pre-processing techniques and methods to large data sets, Hands on practice problems on data pre-processing
Unit 9	Association and Correlation Analysis: Basic concepts of frequent pattern and association rule, frequent item set generation with Apriori algorithm and FP Growth algorithm, Rule generation, Applications of Association rules

Unit 10	Clustering Algorithms and Cluster Analysis: Measures of similarity, K means partitioning method, k-medoids method, CLARANS method, Agglomerative and divisive clustering hierarchical method, BIRCH method,, Density based methods - Subspace clustering, Graph- based clustering - MST clustering, Cluster evaluation, Outlier detection and analysis
Unit 11	Classification: Introduction to classification, Introduction to Classification methods , Basic concepts of binary classification, Bayes theorem and Naive Bayes classifier, Association based classification, Rule based classifiers, Nearest neighbor classifiers, Decision Trees, Random Forest, Perceptrons, Multi-category classification, Model over fitting, Cross validation
Unit 12	Prediction and Classification using WEKA Tool: Applying model for prediction, Bayesian Classification on new imported data, Bayesian Classification on existed dummy data set, Decision Tree classification on both new and dummy data sets, Practice problems on classification methods, Applications of classification for web mining
Unit 13	Clustering methods using WEKA Tool: Introduction to clustering, Introduction to Clustering algorithms, Differentiate clustering and classification, K-means clustering, Hierarchical clustering algorithm,
Unit 14	Applications of Data Warehousing and Data Mining: Case studies of Data Warehousing in financial data analysis and retail industries, Case studies of Data Warehousing in Indian Railway reservation system and other industrial use, Case study on forecasting weather reports

READINGS:

1. DATA MINING: CONCEPTS AND TECHNIQUES by JAWEI HAN, MICHELINE KAMBER AND JIAN PE, MORGAN KAUFMANN
2. DATA WAREHOUSING, DATA MINING AND OLAP by ALEX BERSON AND STEPHEN J. SMITH, MC GRAW HILL
3. BUILDING THE DATA WAREHOUSE by INMON W. H, WILEY

Course code	DECAP448	Course Title	LINUX AND SHELL SCRIPTING		
			WEIGHTAGE		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

C01: learn about Linux environment and basic Linux administration tasks.

C02: demonstrate comprehensive introduction to shell scripting/programming in LINUX.

C03: explain various basic Linux commands and C system programming and debugging techniques in Linux environment.

C04: analyze the usage of Linux utilities, organize directory structures, and develop useful shell scripts.

C05: interpret and configure different Linux servers like samba, FTP, Apache and NFS.

Unit No.	Contents
Unit- 1	Getting started with Linux: The History of UNIX and GNU–Linux, What Is So Good About Linux, Overview of Linux, Additional Features of Linux
Unit- 2	Installation Guide: Booting Linux Installation Program, Partitioning Hard Drives, Setting up Swap Space, Choosing Partitions to Format Booting with LILO, Multi-boot with Other Operating Systems, Logging In from a Terminal or Terminal Emulator, More About Logging In, Run levels.
Unit- 3	Connecting to Internet: Network interfacing tool, Connecting to LAN, DNS (Static and Dynamic connection).
Unit- 4	Installing software: RPM management tool, Querying RPM packages, Package installation in TAR format, Adding & removing packages.
Unit- 5	Utilities: Basic Utilities, Working with Files, Pipe, Four More Utilities, Compressing and Archiving Files, Locating Commands
Unit- 6	File Systems: Obtaining User and System Information, Communicating with Other Users, Directory Files and Ordinary Files, Pathnames, Working with Directories, Access Permissions, Access Control Lists, Links.
Unit- 7	The Shell and popular editors: The Command Line, Standard Input and Standard Output, Running a Command in the Background, Filename Generation/Pathname Expansion, Built-ins, Using VIM to Create and Edit a File, Introduction to vim Features, Command Mode, Input Mode, Emacs versus Vim, Getting Started with Emacs, Basic Editing Commands
Unit- 8	The Bourne Again Shell and TC Shell: Shell Basics, Parameters and Variables, Special Characters, Processes, Re-executing and Editing Commands, Aliases, Functions, Controlling bash, Entering and Leaving the TC Shell, Features Common to the Bourne Again and TC Shells
Unit- 9	Programming the Bourne Again Shell: Control Structures, File Descriptors, Parameters and Variables, Built-in Commands, Expressions
Unit- 10	Linux System Administration: System Administrator and Super user, Rescue Mode, SELinux, System Operation, System Administration Utilities, Setting Up a Server, Important Files and Directories, File Types, File systems, Configuring User and Group Accounts, Backing Up Files, Scheduling Task, System Reports, Parted.
Unit- 11	Web Server Configuration: Apache Web Server, Installing Apache, Configuring Web server, Starting Apache, Setting up first web page.
Unit- 12	File Server Configuration: FTP protocol, Starting FTP server, Using FTP server, Using FTP client to test anonymous read access, Testing FTP server.
Unit- 13	Samba Servers: Overview of SAMBA server, Installing SAMBA server, SAMBA configuration with SWAT and starting SWAT service, Starting and stopping the SAMBA server, Adding SAMBA user, Creating and configuring SAMBA share.

Unit- 14**Network File System:** NFS overview, Planning an NFS installation, Configuring an NFS server, Configuring an NFS client, Using Automount services, Examining NFS security.**READINGS:**

1. DATA COMMUNICATION AND NETWORKING by B.A. FOROUZAN, MCGRAW HILL EDUCATION
2. DATA AND COMPUTER COMMUNICATIONS by WILLIAM STALLINGS, PEARSON

Course code	DECAP453	Course Title	DATA COMMUNICATION AND NETWORKING
			WEIGHTAGES
			CA
			ETE(Th.)
			30
			70

Course Outcomes: Through this course, students will be able to

CO1: recognize different networking devices and their functionalities

CO2: understand the importance of data communication

CO3: utilize the role of protocols in networking

CO4: analyze the services and features of the various layers of network

Unit No.	Contents
Unit 1	Introduction to data communication and computer networks: data communication system-components and characteristics; protocol – its component and functions; definition, characteristics, applications and classification of computer networks – PAN, LAN, MAN, WAN, internetworks, network topologies.
Unit 2	Data and signals: Analog and digital data, Analog and digital signals, transmission impairments and performance metrics and transmission modes: simplex, half duplex and full duplex.
Unit 3	3 Digital and Analog Transmission: digital transmission: line coding, modulation: PCM, DM, ASK, FSK, PSK, amplitude, frequency and phase modulation.
Unit 4	Network models: Layered architecture, benefits of layered architecture, OSI Reference Model, TCP/IP protocol suite, functions of layers in OSI and TCP/IP models, addressing in OSI and TCP/IP models.
Unit 5	Physical layer: Services of physical layer, transmission medium – wired and wireless, switching – message switching, circuit switching, datagram packet switching, virtual circuit packet switching, networking devices - modem, repeater, network interface card, connectors, transceiver, hub-active, passive and intelligent; bridge- local, remote, wireless; switches, routers-static and dynamic; gateways
Unit 6	Data link layer - error and flow control: Introduction, types of errors, one and two dimensional parity method, hamming code, cyclic redundancy check (CRC); framing-character stuffing, bit stuffing, introduction to flow and error control, protocols for noiseless and noisy channels - simplest protocol, stop-and-wait protocol; stop-and-wait ARQ, go-back-n ARQ, selective repeat ARQ.
Unit 7	Data link layer - medium access control protocols: High- level Data Link Control Protocol (HDLC), Point-to-Point Protocol (PPP), random access - pure ALOHA and slotted ALOHA, persistent and non-persistent CSMA, CSMA/CD, CSMA/CA; controlled access.
Unit 8	Network layer - logical addressing: IPV4 addressing, Classful Addressing, Classless Addressing, sub netting, network address translation, classless inter domain routing, IPV6 addressing, internet control messaging protocol (ICMP), address resolution protocol (ARP), reverse address resolution protocol (RARP).
Unit 9	Network layer - routing: unicast routing: routing characteristics, routing algorithms, comparison of routing algorithms; broadcast and multicast routing: broadcast routing, multicast routing, routing in adhoc networks; routing protocols: distance vector, link state, path vector.

Unit 10	Transport layer - protocols: services of transport layer, multiplexing and demultiplexing, connection oriented and connectionless services, connection establishment, connection release, port addressing, connectionless transport using UDP, connection-oriented transport using TCP – handshaking
Unit 11	Transport layer - congestion control and QoS: General principles of congestion control, congestion avoidance and prevention policies; quality of service- types of traffic, traffic shaping, leaky bucket algorithm, token bucket algorithm.
Unit 12	Application layer - services and protocols: remote login (TELNET), file transfer protocol (FTP), domain name system (DNS), e-mail - simple mail transfer protocol (SMTP), post office protocol (POP), internet message access protocol (IMAP).
Unit 13	Internet and WWW: internet basics, hypertext transfer protocol (http), world wide web (www), securing e-mail, security in internet – IPsec, VPN, overview of Digital Signature and Digital certificates technology.
Unit 14	Network Security: network security issues, goals of network security, approaches to network security, cryptography, principles of cryptography, encryption and decryption, public/private key encryption, firewalls, types of firewall technology - network level and application level; IP packets filter screening routers, limitations of firewalls.

READINGS:

1. DATA COMMUNICATION AND NETWORKING by B.A. FOROUZAN, MCGRAW HILL EDUCATION
2. DATA AND COMPUTER COMMUNICATIONS by WILLIAM STALLINGS, PEARSON
3. MS-EXCEL-WORKING WITH WORKSHEET, FORMULAS & FUNCTIONS, INSERTING CHARTS, PRINTING IN EXCEL
4. MS-POWERPOINT-VIEWS, DESIGNING, VIEWING, PRESENTING & PRINTING OF SLIDES.
5. INTERNET: NAVIGATING WITH INTERNET EXPLORER; SURFING THE NET, USING SEARCH ENGINES; USING EMAIL FACILITY.

Course code	DECAP012	Course Title	FUNDAMENTALS OF COMPUTER AND C PROGRAMMING
--------------------	-----------------	---------------------	---

Course Outcomes: Through this course, students will be able to

CO1: understand basic concepts and terminology of information technology.

CO2: understand the basic concepts of programming like data types, control structures, functions and arrays

CO3: perceive problem solving through C programming

CO4: build sequential steps and procedures to solve a given problem

CO5: demonstrate the use of pointers and dynamic memory allocation

CO6: implement the knowledge and insights to create solutions

Unit No.	Contents
Unit 1	Computer Fundamentals: Characteristics & Generation of Computers, Block diagram of Computer. Application of IT in various sectors. I/O Devices. Memory: Types, Units of memory, RAM, ROM, Secondary storage devices – HDD, Flash Drives and Optical Disks: DVD, SSD.
Unit 2	Operating Systems: operating system basics, Purpose of the operating system, types of operating system, providing a user interface, Running Programs, Sharing Information, Managing Hardware, Enhancing an OS with utility software.
Unit 3	Data Communications: Introduction to Data Communication: Definition and advantages, Types of Networks, Network topologies, Transmission Media, Modems.
Unit 4	Data Base Management Systems: Introduction to Database Management System, Components of DBMS, Database Vs. Tables, Data Models, Relational Model, Basics of RDBMS and SQL.
Unit 5	Basics of C Language: Machine Language, Assembly Language, High Level Languages, C Program Structure, Character Set, Identifiers and Keywords, Constants and Variables.
Unit 6	Unformatted and Formatted I/O: Functions- printf(), scanf(), getchar(), putchar(), gets(), puts(), Expressions.
Unit 7	Data Types & Operators: Various data types - data range, size, Unary and Binary operators, Arithmetic Operators, Relational Operators, Logical Operators, Conditional Operators, Assignment Operator, Bitwise Operators.
Unit 8	Control Structure: Designing structured programs by using Top-Down design, Type conversion and Type modifiers, if statements - simple if, if-else, multiple if, if-else ladder, nested if, switch-case statement.
Unit 9	Looping Statements: While, do-while & for statements, break and continue statements, goto statement.
Unit 10	Functions: Function Definition and Prototypes, Scope rules - Local and Global scope of functions, Function arguments - passing arguments by value and passing arguments by reference, Return Type of function, Recursion, Library Functions.
Unit 11	Arrays: Declaring arrays in C, Defining and Processing of 1-dimensional and 2-dimensional arrays, Passing array as an argument to function, Multi-dimensional Arrays.
Unit 12	Array Applications - Sorting and Searching, Character Arrays.
Unit 13	Strings : Defining and Initializing strings, Reading and Writing strings, Processing of strings, String Library Functions - strcat(), strcpy(), strcmp(), strlen(), strrev().

Unit 14	Storage Classes: Storage class specifiers, Scope of a variable, Auto, Static, Extern, Register, Static variables and functions, Const Qualifier.
----------------	---

READINGS:

1. PRADEEP K. SINHA & PRITI SINHA COMPUTER FUNDAMENTALS, BPB PUBLICATIONS
2. C: THE COMPLETE REFERENCE by HERBERT SCHILDT, MC GRAW HILL
3. PROGRAMMING IN ANSI C by E. BALAGURUSWAMY, MC GRAW HILL

Course code	DEMT006	Course Title	ELEMENTARY MATHEMATICS
--------------------	----------------	---------------------	-------------------------------

Course Outcomes: Through this course, students will be able to

C01: describe basic concepts of set theory, relations and functions with the help of various examples.

C02: understand the basics of number system and use them to solve Quadratic equations and linear inequalities.

C03: analyze the arrangement and combinations of objects through permutations and combinations and use it in binomial theorem.

C04: determine the pattern in sequences and solve the infinite series.

C05: explain the concept of matrices and determinants and solve the system of linear equations with the help of matrices.

C06: analyse and use the different kinds of techniques to find dispersion in a data and calculate the probability of a random experiment.

Unit No.	Contents
Unit 1	Sets 1: sets and their representations, the empty set, finite and infinite sets, equal sets, subsets
Unit 2	Sets 2: universal sets, Venn Diagrams, Operations on sets, Compliment of a set
Unit 3	Relation: Cartesian Product of sets, Definition and examples of relations
Unit 4	Function: Definition and examples of functions, some functions and their graphs (constant function, identity function, polynomial function, rational functions, modulus function, signum function, Greatest integer function), algebraic operations on functions
Unit 5	Complex numbers and Quadratic Equations: Complex Numbers, Algebra of Complex Numbers, The Modulus and the Conjugate of a Complex Number, Argand Plane and Polar Representation
Unit 6	Linear Inequalities: Inequalities, Algebraic Solutions of Linear Inequalities in One Variable and their Graphical Representation
Unit 7	Permutations and Combinations: Fundamental Principle of Counting, Permutations
Unit 8	Combinations: combinations and related examples
Unit 9	Binomial Theorem: Binomial theorem for positive integral indicies
Unit 10	Sequence and Series: Sequence, Series, Geometric Progression, Geometric and Arithmetic Mean and their relation
Unit 11	Matrices: Matrix, Types of Matrices, Operations on Matrices, Transpose of a Matrix, Symmetric and Skew Symmetric Matrices, Invertible Matrices
Unit 12	Determinants: Determinant, Area of a Triangle, Minors and Cofactors, Adjoint and Inverse of a Matrix
Unit 13	Statistics: Measures of dispersion, Range, Mean Deviation, Standard deviation
Unit 14	Probability: Probability, Axiomatic Approach to probability

READINGS:

1. MATHEMATICS TEXTBOOK FOR CLASS XI by NCERT, NCERT NEW DELHI
2. MATHEMATICS TEXTBOOK FOR CLASS XII PART-I by NCERT, NCERT NEW DELHI

Course code	DECAP615	Course Title	PROGRAMMING IN JAVA		
			WEIGHTAGE		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

C01: learn the structure and model of the Java programming language

C02: understand the accessibility of fields and methods of an object through String and String Builder classes

C03: develop applications in Java programming language to solve problems

C04: evaluate user requirements for software functionality and assess its implementation in java

C05: implement Lambda functions.

C06: demonstrate object serialization with file handling and exception handling to overcome run-time errors

Unit No.	Contents
Unit 1	Introduction: Introduction to basic java concepts, JDK, JRE, JVM, wrapper classes, inner and nested classes
Unit 2	Arrays and Strings: working with arrays and strings, String, String Buffer and String Builder classes, access specifier, inheritance
Unit3	Collection Framework: Array List class, List Iterator interface, Linked list class, Tree Set class, Priority Queue class
Unit 4	More on Collection Framework: Comparable and Comparator, Properties class, Lambda expressions
Unit 5	Multithreading: implementing multithreading, life cycle of a thread, thread communication,
Unit 6	More on Multithreading: suspending, resuming, deadlock and stopping threads
Unit 7	Synchronization: thread synchronization, handling exceptions during multithreading.
Unit 8	Swings: JButton class, JRadioButton class, JTextArea class, JComboBox class, JTable class.
Unit 9	More on Swings: JColorChooser class, JProgressBar class, JSlider class
Unit 10	Layouts: layout manager, Border Layout, Grid Layout, Flow Layout, Box Layout, Card Layout
Unit 11	Managing data using JDBC: introduction to JDBC, Connectivity with database, CRUD operations, Connection interface
Unit 12	More on JDBC: Statement interface, Result Set interface, Prepared Statement, Result Set Meta Data, and Database Metadata.
Unit 13	Network Programming: Java network terminology, socket classes, server socket classes
Unit 14	More on Network Programming: URL class, URL connection class, Datagram Socket class, Java socket programming

Laboratory Work:

Implementation of JAVA Programming Concepts (Classes and objects, constructor, function overloading, inheritance, working with files, exception handling and multithreading, JDBC, network programming)

READINGS:

1. JAVA: THE COMPLETE REFERENCE by HERBERT SCHILDT, MCGRAW HILL EDUCATION
2. INTRO TO JAVA PROGRAMMING (COMPREHENSIVE VERSION) by Y. DANIEL LIANG, PEARSON PUBLICATION
3. PROGRAMMING WITH JAVA by E. BALAGURUSAMY, MC GRAW HILL PUBLICATION

Course code	DECAP770	Course Title	ADVANCED DATA STRUCTURES		
			WEIGHTAGE		
			CA	ETE(Th.)	ETE
			30	40	30

Course Outcomes: Through this course, students will be able to
C01: perceive advanced data structures and perform operations on them
C02: understand abstract data types and algorithmic complexity
C03: apply suitable data structure for solving problems
C04: implement hashing and collision resolution techniques
C05: evaluate the performance of various algorithms

Unit No.	Contents
Unit 1	Introduction: need of data structures and algorithms, time and space complexity of algorithms, asymptotic notations, average and worst case analysis,
Unit 2	Arrays vs linked lists: operations on arrays and linked lists.
Unit3	Stacks: implementation of stacks, applications of stacks: quick sort, parenthesis checker, arithmetic expression conversion and evaluation, tower of Hanoi problem, role of stack in recursion,
Unit 4	Queues: implementation of queues, priority queue, applications of queues
Unit 5	Search trees: binary search trees: searching, insertion and deletion operations
Unit 6	Tree data structure 1: AVL trees: balancing operations, b-trees: properties and operations,
Unit 7	Tree data structure 2: red-black trees. splay trees: properties and operations, 2-3 trees: properties and operations
Unit 8	Heaps: introduction to heaps, min heap, max heap, operations on heap, applications of heap: priority queue implementation
Unit 9	More on heaps: heap sort, binomial heaps, Fibonacci heaps
Unit 10	Graphs: type of graphs, adjacency matrix and linked adjacency chains, connected components and spanning trees
Unit 11	More on Graphs: breadth first search, depth first search, network flow problems, Warshall's algorithm for shortest path, topological sort
Unit 12	Hashing techniques: linear list representation, hash table representation, hash functions
Unit 13	collision resolution: separate chaining, open addressing-linear probing, quadratic probing
Unit 14	More on hashing: double hashing, rehashing

LABORATORY WORK:

Arrays vs linked lists: operations on arrays and linked lists.

Stacks: implementation of stacks, applications of stacks: quick sort, parenthesis checker, arithmetic expression conversion and evaluation, tower of Hanoi problem, role of stack in recursion,

Queues: implementation of queues, priority queue, applications of queues

Search trees: binary search trees: searching, insertion and deletion operations

Tree data structure 1: AVL Trees: balancing operations, b-trees: properties and operations,

Tree data structure 2: red-black trees. splay trees: properties and operations, 2-3 trees: properties and operations

Heaps: introduction to heaps, min heap, max heap, operations on heap, applications of heap: priority queue implementation

Course Code	DECAP456	Course Title	INTRODUCTION TO BIG DATA		
			WEIGHTAGE		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

CO1: analyze the need and importance of fundamental concepts and principles of Big Data

CO2: apply internal functioning of different modules of Big Data and Hadoop

CO3: evaluate the big data ecosystem and appreciate its key components

CO4: design and implement big data analytics solutions using advanced tools, machine learning techniques, and visualization methods.

Unit No.	Contents
Unit 1	Introduction to Big Data: Big Data and its importance, The V's of Big Data, Challenges and Applications of Big Data, Tools used in Big Data Scenario.
Unit 2	Foundations for Big Data: Distributed file system, scalable computing over internet, programming models for big data.
Unit3	Data Models: Data model vs. data format, data stream, understanding data lakes, exploring streaming sensor data.
Unit 4	NOSQL Data Management: Introduction to NoSQL, aggregate data models, aggregates key- value and document data models relationships, graph databases, schema less databases, materialized views, distribution models, sharding, version, Map reduce partitioning and combining, composing map-reduce calculations.
Unit 5	Introduction to Hadoop: Understand what Hadoop is, learning about other open-source software related to Hadoop, understand how Big Data solutions can work on the Cloud, Hadoop - Big Data Overview, Hadoop - Big Data Solutions.
Unit 6	Hadoop Administration: Hadoop - Environment Setup, Hadoop - HDFS Overview, Starting HDFS, Hadoop - Command Reference.
Unit 7	Hadoop Architecture: Understand the main Hadoop components, learn how HDFS works, List data access patterns for which HDFS is designed, describe how data is stored in an HDFS cluster.
Unit 8	Hadoop Master Slave Architecture: Hadoop – Map Reduce, Hadoop – Streaming, Hadoop – Multi Node Cluster, Creating User Account, Configuring Key Based Login, Installing Hadoop and Configuring Hadoop on Master Server.
Unit 9	Hadoop Node Commands: Configuring Master Node, Configuring Slave Node, Format Name Node on Hadoop Master, Starting Hadoop Services, Adding a New Data Node in the Hadoop Cluster, Adding User and SSH Access.
Unit 10	Map Reduce Applications: Map Reduce workflows – unit tests with MR Unit – test data and local tests, anatomy of Map Reduce job run, classic Map-reduce, YARN failures in classic Map-reduce and YARN job scheduling, shuffle and sort, task execution, Map Reduce types, input formats, output formats.
Unit 11	Hadoop Ecosystem: Applications on Big Data Using Pig and Hive, Data processing operators in Pig, Hive services, HiveQL, Querying Data in Hive, fundamentals of HBase and Zookeeper, IBM Info Sphere Big Insights and Streams.
Unit 12	Predictive Analytics: Simple linear regression- Multiple linear regression- Interpretation of regression coefficients. Visualizations, Visual data analysis techniques, interaction techniques, Systems and applications
Unit 13	Data Analytics with R: Machine Learning, Introduction, Supervised Learning, Unsupervised Learning, Collaborative Filtering, Big Data Analytics with Big R.

Unit 14	Big data management using SPLUNK: data integration process, Big Data Management and Processing using Datameer, Installing Splunk Enterprise on Windows, Installing Splunk Enterprise on Linux, Exploring Splunk Queries.
----------------	---

READINGS:

1. BIG DATA by ANIL MAHESHWARI, MC GRAW HILL
2. UNDERSTANDING BIG DATA: ANALYTICS FOR ENTERPRISE CLASS HADOOP AND STREAMING DATA by GEORGE LAPIS, CHRIS EATON, TOM DEUTSCH, PAUL ZIKOPOULOS, DIRK DEROOS, MC GRAW HILL.
3. BIG DATA AND ANALYTICS by SEEMA ACHARYA, SUBHASHINI CHELLAPPAN, WILEY

Course Code	DECAP470	Course Title	CLOUD COMPUTING
			WEIGHTAGES
			CA
			ETE(Th.)
			30
			70

Course Outcomes: Through this course, students will be able to

CO1: apply the fundamental concepts in data centres to understand the trade-offs in power, efficiency and cost.

CO2: identify resource management fundamentals, i.e. resource abstraction, sharing and sandboxing and outline their role in managing infrastructure in cloud computing.

CO3: analyze various cloud programming models and apply them to solve problems on the cloud.

CO4: evaluate cloud virtualization technologies, security mechanisms, and standards to design secure and efficient cloud-based solutions.

Unit No.	Content
Unit-1	Cloud computing introduction: cloud computing fundamentals, history of cloud computing, cloud components, usage scenarios and applications
Unit-2	Cloud computing architecture and models: why cloud computing matters, issues in cloud, cloud architecture, cloud storage, NIST cloud computing reference model, Cloud cube model.
Unit-3	Cloud services: types of cloud services, service providers, software as a service, platform as a service, infrastructure as a service, database as a service, monitoring as a service, communication as services.
Unit-4	Introduction to big data: big data, Hadoop framework, introduction to Mapreduce, phases of Mapreduce.
Unit-5	File system in cloud: Google file system, architecture of Google file system, operations of Google file system, Hadoop distributed file system, architecture of HDFS, operations of HDFS, comparison of GFS and HDFS.
Unit-6	Collaborating using Google cloud: create word documents in collaboration, collaborating on spreadsheets, collaborating using Google forms, storing and sharing files.
Unit-7	Collaborating on event management: collaborating on calendars, schedules and task management, creation of to-do lists, Collaborating on Contact Management.
Unit-8	Collaborating on Project Management: Project Management, project management tools, management of project using a cloud-based project management tool.
Unit-9	Collaborating on Databases: understanding databases, working of databases, working of online databases, exploring web-based databases, evaluating online databases.
Unit-10	Collaborate using web-based communication: web-based communication tools, web mail services, instant messaging tools, web conferencing tools, social networks and groupware, blogs and wikis.
Unit-11	Virtualization concepts: need for virtualization, types of virtualization, features of virtualization, working of virtualization in cloud, pros and cons of virtualization.
Unit-12	Virtual machine: virtual machine properties, interpretation and binary translation, hypervisors, types of hypervisors, HLL VM: Xen, KVM , VMware, virtual box, hyper-V.
Unit-13	Security and standards in Cloud: security in clouds, security challenges, the open cloud consortium, the distributed management task force, standards for application developers, standards for messaging, standards for security

Unit-14	Application of cloud computing: end user access to cloud computing, application of cloud service in various areas of life, mobile internet devices and the cloud
----------------	---

READINGS:

1. CLOUD COMPUTING: "A PRACTICAL APPROACH by ANTOHY T VELTE, MC GRAW HILL
2. CLOUD COMPUTING FOR DUMMIES by BLOOR R., KANFMAN M., HALPER F. JUDITH HURWITZ, WILEY

Course code	DEMT403	Course Title	MATHEMATICAL FOUNDATION FOR COMPUTER SCIENCE	
			WEIGHTAGES	
			CA	ETE(Th.)
			30	70

Course Outcomes: Through this course, students will be able to

CO1: recall formal logical arguments of propositional logic

CO2: perceive problem solving through the basics of combinatorics

CO3: compare the basic discrete structures and algorithms

CO4: apply the concepts of trees to find the shortest path

CO5: infer properties of graphs and be able to relate these to practical examples

CO6: formulate and prove theorems about trees, connectivity, coloring and planar graphs

Unit No.	Contents
Unit- 1	Introduction to proposition, conjunction, disjunction & negation, propositions and truth table, Tautologies and contradictions, equivalence of formulas, duality law.
Unit- 2	Predicates, the statement function, variables and quantifiers, predicate formulas. Methods of proof (Inference Theory).
Unit- 3	Partially Ordered Sets, HASSE Diagrams of POSETS, Well-Ordered Sets, Lattices, Bounded Lattices, Distributive Lattices
Unit- 4	Introduction to Boolean algebra, Basic Definitions, Duality, Basic Theorems, Boolean Algebras as Lattices
Unit- 5	Basic Counting Principles, Mathematical Functions, Permutations
Unit- 6	Combinations, the Pigeonhole Principle
Unit- 7	Terminology and special types of graphs, graph isomorphism
Unit- 8	Paths, cycles and connectivity
Unit- 9	Euler and Hamilton path and graphs
Unit- 10	shortest path problems, planner graphs,
Unit- 11	graph coloring, chromatic number of graphs
Unit- 12	tree and its properties, rooted tree
Unit- 13	spanning and minimum spanning tree, binary search tree
Unit- 14	infix, prefix, and post-fix notation, pre-order traversal, in-order traversal, and post-order traversal

READINGS:

1. DISCRETE MATHEMATICS AND ITS APPLICATIONS by KENNETH H ROSEN., M.G.Hills
2. DISCRETE MATHEMATICS (SCHAUM'S OUTLINES) (SIE) by SEYMOUR LIPSCHUTZ, MARC LIPSON, VARSHA H. PATIL, MCGRAW HILL EDUCATION

Course code	DECAP472	Course Title	WEB TECHNOLOGIES		
			WEIGHTAGE		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

CO1: understand the website layout creation using HTML language.

CO2: apply the website planning, management and maintenance techniques

CO3: apply dynamic website creation using JavaScript and Query

CO4: illustrate logic implementation on a web page

CO5: understand how to manage versatile data on a web page

Unit No.	Contents
Unit- 1	Overview of HTML: structure of HTML page, working with tags and attributes, working with list and inline elements, implementing tables and forms
Unit- 2	DHTML with CSS: concepts of selectors, formatting tags with CSS, responsive layout designing using CSS flexbox
Unit- 3	Introduction to Bootstrap: introduction to bootstrap, associating bootstrap with mobile web interfaces
Unit- 4	Using the framework: starter template, bootstrap theme, bootstrap-grids, bootstrap- jumbotron, bootstrap-narrow jumbotron
Unit- 5	Navbars in action: bootstrap-navbar, bootstrap-static top navbar, bootstrap-fixed navbar
Unit- 6	Custom components: bootstrap-cover, carousel, blog, dashboard, sign-in page, justified nav, sticky footer, sticky footer with navbar
Unit- 7	Introduction to ReactJS: Reactjs architecture, Reactjs and web development
Unit- 8	Pure React concepts: setting up webpage using react and react DOM, constructing elements with data, concept of DOM rendering, working with factories in react
Unit- 9	Using React with JSX: defining react elements using JSX, concept of trans piling and babel, working with recipes and webpack
Unit- 10	State management and component tree in ReactJS: validating properties with react, managing data using state in react, using component tree to manage state
Unit- 11	Working with React router and server: web page management by incorporating react router, data driven web applications and router parameters, react based server rendering, react based server communication
Unit- 12	Components in detail: stateful vs stateless components, creating class-based components, more about set State () method, Passing props to class-based components, passing function as props
Unit- 13	Styling components: Introduction to CSS modules, creating mobile responsive components
Unit- 14	Functional programming with Javascript: programming constructs in Javascript, introduction to es6 class, components of es6 class

LABORATORY WORK:

1. Program to implement basic concepts of HTML.
2. Program to implement CSS3.
3. Program to implement the box model and positioning properties in CSS3.
4. Program to implement basics of bootstrap.
5. Program to implement the basics of JavaScript.
6. Program to implement Objects in JavaScript.
7. Program to implement Arrays in JavaScript.
8. Program to implement Functions in JavaScript.

9. Program to build web applications in JavaScript.
10. Program to implement the concept of Dynamic views in JavaScript.

READINGS:

1. HTML 5 BLACK BOOK, COVERS CSS 3, JAVASCRIPT, XML, XHTML, AJAX, PHP AND JQUERY, 2ND DT EDITORIAL SERVICES
2. HTML & CSS: THE COMPLETE REFERENCE, by THOMAS A. POWELL, MC GRAW HILL

Course code	DECAP776	Course Title	PROGRAMMING IN PYTHON		
			WEIGHTAGE		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

C01: understand the basic structure and features of Python programming

C02: interpret object-oriented programming concepts such as encapsulation, inheritance and polymorphism as implemented in Python

C03: apply pandas and NumPy for data analysis

C04: implement machine learning algorithms

C05: analyze real-life situation specific problems and perceive solutions

C06: build exploratory data analysis and visualizations

Unit No.	Contents
Unit- 1	Python basics: introduction, data types and operators, control statements, functions
Unit- 2	Python data structures: strings, lists, sets, tuples and dictionaries
Unit- 3	OOP concepts: OOP features, encapsulation, inheritance
Unit- 4	More on OOP concepts: function overloading, operator overloading and method overriding,
Unit- 5	Exception handling: catching exceptions, catching multiple exceptions, raising exceptions, custom exception
Unit- 6	Introduction to NumPy: arrays vs lists, array creation routines, arrays from existing data, indexing and slicing
Unit- 7	Operations on NumPy arrays: array manipulation, broadcasting, binary operators
Unit- 8	NumPy functions: mathematical functions, statistical functions, sort, search and counting functions
Unit- 9	Handling data with pandas: introduction to pandas, series, Dataframe, sorting, working with csv files, operations using data frame
Unit- 10	Data cleanup: investigation, matching and formatting
Unit- 11	Data visualization: introduction to matplotlib, line plot, multiple subplots in one figure, bar chart, histogram, box and whisker plot, scatter plot, pie charts
Unit- 12	Data visualization: introduction to seaborn, seaborn Vs matplotlib, data visualization using seaborn
Unit- 13	Machine learning: introduction, types of machine learning
Unit- 14	Machine learning algorithms: linear regression, k-nearest neighbours, decision trees, random forests, k-means clustering

LABORATORY WORK:

Implementation of Python programming concepts (control statements, functions, strings, lists, sets, tuples, dictionaries, OOP concepts, exception handling, NumPy arrays and functions, pandas, data visualization, machine learning algorithms)

READINGS:

1. Programming and Problem Solving with Python by Ashok Kamthane, Amit Ashok kamthane, McGraw Hill 2nd Edition
2. Hands-On Data Analysis with NumPy and pandas by Curtis Mille, Kindle Edition
3. Python for Data Analysis by Wes McKinney, O'Reilly Media
4. Machine Learning for Absolute Beginners by Oliver Theobald, Kindle Edition

Course code	DECAP660	Course Title	NETWORK ADMINISTRATION		
			WEIGHTAGES		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

C01: describe the basic operations, addressing mechanisms and protocols used in the OSI and TCP models.

C02: examine the IP addressing techniques and understanding about IOS to configure and setup networking devices.

C03: articulate the various routing protocols and configuration process of the switches and VLANs

C04: analyze a network for various types of application layer services and network address translation process during internetwork communication.

Unit No.	Content
Unit 1	Networking basics: Introduction to internetworking, layered approach, OSI reference model, TCP/IP protocol architecture, network access layer, internet layer, transport layer, application layer, addressing mechanisms in TCP/IP.
Unit 2	Ethernet networking: collision domain, broadcast domain, ethernet at data link layer: half and full duplex ethernet, ethernet addressing, ethernet frames, ethernet at physical layer, data encapsulation, three-layer hierarchical model.
Unit 3	Ethernet cabling: coaxial cables, twisted pair cables: straight-through, crossover and rolled cables; fiber-optic cables: concepts of reflection and refraction. single mode, multimode step index and multimode graded index.
Unit 4	IP addressing: IP addressing basics, types of IP addressing, IPv4 addressing, classful addressing, IPv4 classes, IPv4 address types, classless addressing, troubleshooting IP addressing.
Unit 5	Subnetting: subnetting basics, IP subnet-zero, How to Create Subnets, Subnet Masks, Understanding the Powers of 2, Classless Inter-Domain Routing (CIDR), Subnetting Class A, B and C networks, fixed length subnet masking (FLSM), variable length subnet masking (VLSM), summarization
Unit 6	Internetwork operating system (IOS): IOS user interface, command line interface (CLI), basic commands, configuration modes, CLI prompts, editing and help features, router and switch administrative configurations, backing up and restoring the IOS
Unit 7	Configuring IP routing: IP routing process, packet-forwarding techniques, static routing, default routing, dynamic routing: IGP, EGP, autonomous system, administrative distances, classes of routing protocols: distance-vector, link-state, hybrid routing protocols
Unit 8	Router configuration: Configuration of routing information protocol (RIPv1 and RIPv2), enhanced IGRP (EIGRP), open shortest path first (OSPF), OSPF terminology, OSPF operations
Unit 9	Layer-2 switching: switching services, functions of layer 2 switching: address learning, forward/filter decisions, port security, loop avoidance, limitations of layer-2 switching
Unit 10	Virtual LAN configuration: VLAN basics, broadcast control, configuring VLAN interfaces, frame tagging, VLAN identification methods, inter VLAN routing.
Unit 11	Access control list (ACL) : introduction to access control list, wildcard masking, named access control list, standard access control list, extended access control list, monitoring access control lists
Unit 12	Network address translation (NAT): private and public addresses, NAT terminology, types of network address translation, static NAT, dynamic NAT, port address translation

	(PAT), verification of NAT
Unit 13	Application layer protocols: WWW, HTTP, DHCP, remote logging using TELNET, domain name system (DNS), FTP, e-mail, SMTP, POP3, IMAP4
Unit 14	Network security: cryptography, symmetric and asymmetric cryptography, IPSec, transport and tunnel mode, virtual private networks (VPN), firewalls

List of Practicals / Experiments:

IOS command line interface (CLI)

- entering the CLI
- router or switch modes
- CLI prompts
- editing and help features

Administrative configurations

- hostname
- banners
- setting Passwords
- encrypting Your Passwords
- Telnet/SSH
- descriptions

Router and switch interfaces

- bringing up an interface
- viewing and saving the configuration
- deleting the configuration and reloading the device
- verifying your configuration
- backing up and restoring the configuration

Managing internetwork

- configuring DHCP
- network time protocol (NTP)
- cisco discovery protocol (CDP)
- resolving hostname
- checking network connectivity and troubleshooting

IP Routing

- static routing
- dynamic routing
- configuring routing information protocol (RIP)
- configuring routing information protocol version 2 (RIPv2)
- configuring enhanced interior gateway protocol (EIGRP)
- configuring open shortest path first (OSPF)

Layer-2 switch configuration

- administrative functions
- configuring the IP address and subnet mask
- setting the IP default gateway
- setting port security
- testing and verifying the network.

Configuring VLANs

- assigning switch ports to VLANs
- configuring trunk ports
- configuring inter-VLAN routing

Configuring and verifying access control lists

- wildcard masking

- standard access control list
- controlling VTY (TELNET/SSH) access
- extended access control list
- named access control list
- monitoring access control lists

Network address translation (NAT) configuration.

- static network address translation
- dynamic network address translation
- port address translation
- verification of NAT
- testing and troubleshooting NAT

READINGS:

1. CISCO CERTIFIED NETWORK ASSOCIATE STUDY GUIDE by TODD LAMMLE, WILEY
2. CCNA ROUTING AND SWITCHING COMPLETE STUDY GUIDE by TODD LAMMLE, CISCO PRESS

Course code	DECAP796	Course Title	CYBER FORENSIC		
			WEIGHTAGES		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

CO1: understand the concept of forensic science and cyber forensics

CO2: apply various cyber forensics tools to investigate the digital footprints for evidence

CO3: outline the investigation report based on the digital traces and their legal perspective

CO4: analyze antiforensics techniques and conclude the digital evidence used to commit cyber offenses

Unit No.	Content
Unit 1	Key Technical Concepts: bits, bytes and number system, file extensions and file segments, storage and memory concept, file systems
Unit 2	Digital Evidence Handling: Forensic Investigation Process, E-Discovery, Chain of Custody, Stochastic Forensics, Search & seizure, evidence preservation, data & case analysis, generating investigation report.
Unit 3	Collecting Evidence: cyber investigation, crime scenes and evidence, investigating methodology, documenting the scene, chain of custody, cloning, live system versus dead system, hashing Challenges and concerns of Cyber Forensic: standards and controls, cloud forensics, SSDs
Unit 4	Understanding Computer Forensics: Introduction to Computer Forensics, Types & Characteristics of Computer Forensic, Role of Digital Evidence, Sources of Potential Evidence, Forms of Cyber Crime, Role of First Responder, Forensics Expert and Computer Investigation procedures.
Unit 5	Windows System Artifacts: deleted data, volatile information, non-volatile information, windows memory analysis, inside the windows registry, cache, cookies, history analysis in web browser, hibernation file, registry, print spooling, metadata, link files, restore points and shadow copy concept.
Unit 6	Anti forensics: hiding data, passwords attacks, password cracking methods, default password database, steganography, data destruction.
Unit 7	Investigative reports: introduction to investigative reports, report specifications, layout of an investigative report, guidelines for writing a report, importance of consistency, important aspects of a good report, dos and don'ts of forensic computer investigations.
Unit 8	Storage Devices & Data Recovery Methods: Storage Devices- Magnetic & Non-magnetic medium, Optical Storage, Working of HDD & SSD.
Unit 9	Data Acquisition, File Carving, Data deletion and data recovery method and techniques, volatile data analysis. Steganography and its types. Case Studies.
Unit 10	Internet and Email Forensics: internet overview, role of web browser in cyber forensics, email and cyber forensics, investigating e-mail crimes and violations. Email Forensics- Header Analysis, Tools to acquire email data, deleted emails, Examining Browsers
Unit 11	Network Forensics: social engineering, network fundamentals, network security tools, network attacks.
Unit 12	Mobile Device Forensics: cellular networks, operating systems, cell phone evidence, cell phone forensics tools, global positioning system
Unit 13	Understanding Network Forensics: preparing for a Network forensics Investigation, Investing Network Events & Network Traffic, Tools used for Network Forensics. Case Studies.

Unit 14	Advanced Internet Forensics: Browser data investigations, Internet history Recovery, Cache reconstruction, Reverse engineering of browser log data. In-private browsing and its implications in forensic investigations, Investigation techniques and Methods for analysing and interpreting information related to internet technologies.
----------------	---

List of Practicals / Experiments:

Analyzing storage devices and file system

- Disk Layout format
- partition of hard drive
- files system (FAT, NTFS) and files (Extensions)
- Identification of unallocated partition

Creating disk imaging

- magnetic disk imaging
- USB disk imaging

Preserving integrity of forensic evidence

- error handling
- logging
- splitting and verification
- hashing (MD5, SHA1, SHA256, SHA384, and SHA512)

Recovering deleted files

- recover deleted files from disk drives
- generating report using FTK tool
- extract exchangeable image file format (EXIF) data from Image Files using Exifreader Software

Disk Imaging and Cloning

- magnetic disk imaging
- USB disk imaging using Guymager and FTK imager
- forensic image of the hard drive using EnCase forensics
- restoring the evidence image using EnCase forensics

Antiforensics

- deleting evidence
- encrypting files using antiforensics tools
 - steganography for hiding data
- file infection using malware
- hiding and extract any text file behind an image file/ audio file using command prompt

Investigating Network Traffic and Ram Data Acquisition

- live packet capturing and packet analysis
- tracking emails and investigating email crimes
- collect email evidence in victim's PC
- email forensics
- comparison of two files for forensics investigation by comparing IT software
- live forensics case investigation using autopsy

READINGS:

Course code	DECAP661	Course Title	SECURING NETWORK AND IT INFRASTRUCTURE		
			WEIGHTAGES		
			CA	ETE(Th.)	ETE (Pr.)
				40	30

Course Outcomes: Through this course, students will be able to

CO1: define the need of system security concepts, issues in computer security and user authentication mechanisms.

CO2: explain the need and issues of software or application level security.

CO3: plan the working of cryptographic algorithms to secure transmission.

CO4: analyze the vulnerabilities of network security.

CO5: evaluate the countermeasures for keeping the software and operating systems secure.

Unit No.	Content
Unit 1	Basics of Computer Security : Overview of computer security concepts, Values of Assets, The Vulnerability–Threat–Control Paradigm; Threats: Confidentiality, Integrity, Availability; Types of Threats, Types of Attackers; Harm: Risk and Common Sense, Method–Opportunity–Motive; Vulnerabilities, Controls, Basics of attacks, Internet threat model
Unit 2	Toolbox: Authentication, Authentication: Identification Versus Authentication, Authentication Based on Phrases and Facts: Something You Know, Authentication Based on Biometrics: Something You Are, Authentication Based on Tokens: Something You Have: Federated Identity Management, Multifactor Authentication, Secure Authentication.
Unit 3	Access Controls: Access Policies, Implementing Access Control, Procedure-Oriented Access Control, Types of Access Control, Access Control Matrix.
Unit 4	Encryption and Cryptography: Block & Stream ciphers, Symmetric encryption, Asymmetric encryption, Problems Addressed by Encryption, Terminology, DES: The Data Encryption Standard, AES: Advanced Encryption System, Public Key Cryptography, Public Key Cryptography to Exchange Secret Keys, Message authentication, Digital signatures, Digital certificates, Error Detecting Codes, Trust, Certificates: Trustable Identities and Public Keys, Digital Signatures—All the Pieces
Unit 5	Firewalls: What Is a Firewall, Design of Firewalls, Types of Firewalls, Personal Firewalls, Comparison of Firewall Types, Example Firewall Configurations, Network Address Translation (NAT), Data Loss Prevention
Unit 6	Programs and Programming: Unintentional (No malicious) Programming Oversights, Buffer Overflow, Incomplete Mediation, Time-of-Check to Time-of-Use, Undocumented Access Point, Off-by-One Error, Integer Overflow, Unterminated Null-Terminated String, Parameter Length, Type, and Number, Unsafe Utility Program, Race Condition.
Unit 7	Malicious Code—Malware: Malware—Viruses, Trojan Horses, and Worms, Technical Details: Malicious Code; Countermeasures: Countermeasures for Users, Countermeasures for Developers, Countermeasure Specifically for Security, Security models, Disaster recovery, Trusted computing, and multilevel security
Unit 8	Threats to Network Communications, Interception: Eavesdropping and Wiretapping, Modification, Fabrication: Data Corruption, Interruption: Loss of Service, Port Scanning, Vulnerability Summary, Browser Attacks, Browser Attack Types, How Browser Attacks Succeed: Failed Identification and Authentication; Web Attacks Targeting Users, False or Misleading Content, Malicious Web Content, Protecting Against Malicious Web Pages
Unit 9	Obtaining User or Website Data: Code Within Data, Website Data: A User’s Problem, Foiling Data Attacks; Email Attacks: Fake Email, Fake Email Messages as Spam, Fake (Inaccurate) Email Header Data, Phishing, Protecting Against Email Attacks

Unit 10	Operating System and Software Security: Introduction to operating system security, Identity and authentication, System security planning, Malicious code, Worms, Intruders, Applications security, Application level attacks
Unit 11	Database and Network Security: Need for database security, Integrity constraints in database, commit protocols, Database security techniques, Internet security protocols and standards, Threats in networks, SSL/TLS, DDoS, Network attacks
Unit 12	Securing Emerging Computing System: Cyber-Physical system overview and security, Internet-of-Things and smart grid security, Data & Infrastructure security in Cloud/Edge computing, Blockchain and Decentralized applications security
Unit 13	Management and Incidents, Security Planning: Organizations and Security Plans, Contents of a Security Plan, Security Planning Team Members, Assuring Commitment to a Security Plan, Business Continuity Planning: Assess Business Impact, Develop Strategy, Develop the Plan
Unit 14	Handling Incidents: Incident Response Plans, Incident Response Teams, Risk Analysis, The Nature of Risk, Steps of a Risk Analysis, Arguments for and Against Risk Analysis. Dealing with Disaster: Natural Disasters, Power Loss, Human Vandals, Interception of Sensitive Information, Contingency Planning, Physical Security

List of Practicals / Experiments:

System Security

- Internet Attacks
- Authentication of a User or Program
- Ethical Issues in Computer Security
- Access Control
- File Protections in a Unix or Windows File System

Security and Cryptography

- Private Key and Public Key Cryptographic Systems
- Classical Encryption Techniques: Substitution and Transposition
- Encryption and Decryption of RSA – Public Key Cryptography Algorithm
- Intrusion detection System (IDS) Tool

Application Security

- Protecting and Securing MS Office Products
- Protect your PC by Creating User Accounts and Passwords
- Types of Malicious Codes
- Passwords Cracking Techniques
- Avoid viruses and other Malware on one's PC

Network Security

- Wireless Network Components
- Mobile Security Apps
- Firewall Security in Windows
- Security of Web Browser
- Vulnerabilities for Hacking a Web Applications

READINGS:

1. SECURITY IN COMPUTING by CHARLES P. PFLEEGER, PEARSON
2. COMPUTER SECURITY: PRINCIPLES AND PRACTICE by WILLIAM STALLINGS AND LAWRIE BROWN, PEARSON

Course Code	DECAP662	Course Title	VULNERABILITY ASSESSMENT AND PENetration TESTING		
			WEIGHTAGES		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

CO1: understand the basic concept, fundamentals and practice of penetration testing

CO2: apply the working of hacking and cracking techniques, know vulnerabilities in existing software

CO3: analyze legal and illegal techniques used by hackers and their counter measures

CO4: evaluate different and specific types of assaults and spoofing techniques

Unit No.	Content
Unit-1	Introduction to Vulnerability: computer security, Types of threats, Types of attack, Vulnerabilities, Major mail vulnerability, Server application vulnerabilities, Browser based vulnerabilities, Web application vulnerabilities, Web server vulnerabilities, Windows vulnerabilities.
Unit-2	Introduction to Scanning: Tools, Evolution of Scanners, How Scanners Work, Types of Scanning, TCP Connect Scanning, Half-Open Scanning, UDP Scanning, IP Protocol Scanning, Ping Scanning, Stealth Scanning. Review of Scanner Technology, Discovery, Reconnaissance, Vulnerability Identification, Exploitation.
Unit-3	Vulnerability Assessment: Incomplete mediation vulnerability, Race condition vulnerability, Time to-check or time-to-use vulnerability, Undocumented access point vulnerability, Countermeasure, Malicious code attack, Malware, Voluntary introduction vulnerability, Unlimited privilege vulnerability countermeasure using detection tools.
Unit-4	Vulnerability and Countermeasure: Key-logging attack, Data access threat, Data and reputation harm, Physical access vulnerability, Misplaced trust vulnerability, Insider's vulnerability, Weak authentication vulnerabilities, Countermeasure
Unit-5	Sniffers: Introduction to Sniffer, Sniffer Types: Bundled Sniffers, Commercial sniffers, Free Sniffers; Sniffer Operations: sniffer components, MAC addresses, Data transfer over a network, Role of sniffers over a network Sniffer Programs: Wireshark (Ethernet)
Unit-6	Spoofing and Session Hijacking: The process of IP spoofing attack, Types of spoofing, Spoofing tools, Prevention and mitigation, TCP session hijacking, Session hijacking tools, UDP hijacking, Prevention of session hijacking
Unit-7	TCP/IP Vulnerabilities: Introduction to TCP/IP Vulnerabilities: Data Encapsulation, IP Spoofing, ICMP Attacks, TCP SYN Attacks, RIP Attacks.
Unit-8	Securing TCP/IP: IP (Internet Protocol), TCP, Connection Setup and Release, TCP/IP Timers; Vulnerabilities in TCP/IP: IP Spoofing, Source Routing, Connection Hijacking, ICMP Attacks, TCP SYN Attacks, RIP Attacks; Securing TCP/IP: IP Security Architecture (IPSec)
Unit-9	Introduction to Penetration Testing: Impact of unethical hacking, Hacker communities, Introduction to reconnaissance, social engineering, Dumpster diving, Internet foot-printing, Introduction to scanning, Types of scanning, Sniffer types, Sniffer operation, Sniffer program, Sniffer detection, Protecting against sniffer.
Unit-10	DNS Test, Network Latency Tests, Ping Test, Source-Route Method, Decoy Method, Commands, Time Domain Reflectometer (TDR) Method, Protecting Against a Sniffer: Secure Sockets Layer (SSL), Pretty Good Privacy (PGP) and Secure/Multipurpose Internet Mail Extensions (S/MIME), Secure Shell (SSH), More Protection.
Unit-11	Encryption and Password Cracking: Introduction to Encryption and Password Cracking, Cryptography; Symmetric and Asymmetric Key Encryption: Symmetric Key Encryption,

	Asymmetric Key Algorithms, Cryptanalysis. Descriptions of Popular Ciphers: Symmetric Key Ciphers, Asymmetric Key Ciphers, Cryptographic Hash Functions.
Unit-12	Attacks on Passwords: Dictionary Attacks, Hybridization, Brute-Force Attacks, Observation, Keyloggers, Social Engineering, Sniffing Methods, Password File Stealing.
Unit-13	Password Crackers: Aircrack, Cain & Abel, John the Ripper, THC Hydra, L0phtCrack and Lc6
Unit-14	DOS Attacks: Attack on passwords, Password crackers Denial of Service Attack: Causes of DoS attack, Types of DoS attacks, Known DoS and DDoS attack.

List of Practical's / Experiments:

Vulnerability Assessment:

- Vulnerabilities
- Major mail vulnerability
- Server application vulnerabilities
- Browser based vulnerabilities
- Web application vulnerabilities
- Web server vulnerabilities
- Windows vulnerabilities

Spoofing:

- IP spoofing attack,
- Spoofing tools

Sniffing and Scanning:

- Sniffing the packet through wireshark
- Scanning through nmap/zenmap
- Port scanning
- Host scanning
- Scanning target to attack

Introduction to Penetration Testing:

- Internet foot-printing
- Sniffer operation
- Sniffer program
- Sniffer detection
- Protecting against sniffer

Encryption and Password Cracking:

- Symmetric and asymmetric key encryption
- Descriptions of popular ciphers
- Attack on passwords
- Password crackers

Denial of Service Attack:

- To demonstrate the causes of DoS attack
- To demonstrate different types of DoS attacks

READINGS:

1. COMPUTER SECURITY AND PENETRATION TESTING by ALFRED BASTA, NADINE BASTA AND MARY BRROWN, CENGAGE LEARNING
2. ANALYZING COMPUTER SECURITY by CHARLES P. PFLEEGER, SHARI LAWRENCE PFLEEGER, PEARSON EDUCATION INDIA

Course Code	DEPEA515	Course Title	ANALYTICAL SKILLS-I
--------------------	-----------------	---------------------	----------------------------

WEIGHTAGES	
CA	ETE(Th.)
30	70

Course Outcomes: Through this course, students will be able to

C01: observe the basic concepts of reasoning and quantitative aptitude

apply the learned concepts to solve the company specific reasoning and quantitative aptitude tests

C03: analyze the problem and use logic to interpret and handle different situations

C04: understand the concepts to solve the problems in given time

C05: reproduce the concepts and use it to solve the applications

C06: evaluate the knowledge by cracking online tests

Unit No.	Content
Unit 1	Number system: classification of numbers, rules of divisibility, multiplication and squaring of numbers, HCF & LCM of numbers, cyclicity of unit digit, remainder theorem
Unit 2	Average: average of numbers, arithmetic mean, weighted average
Unit 3	Mathematical operations: BODMAS rule, calculation based problem, conversion of symbols into signs
Unit 4	Percentage: commodity price increase/decrease, comparison based questions, population based examples, successive percent changes, budget based problems
Unit 5	Profit and loss: cost price, selling price, profit and loss, calculation of profit/loss percent, false weight, discount, successive discount, marked price
Unit 6	Direction sense test: understanding of directions, different types of practice problems
Unit 7	Blood relation: cracking jumbled up descriptions, relation puzzle, coded relations
Unit 8	Number, ranking and time sequence: number test, ranking test, time sequence test
Unit 9	Ratio and proportion: ratio and its types, proportion and its types, direct and indirect variations, partnership
Unit 10	Alligation or mixture: concept and rules of alligation, problem based on mixing of liquids/items
Unit 11	Problem on ages and numbers: problems on ages, problem on numbers
Unit 12	Permutation and combination: factorial, difference between permutation & combinations, circular permutation, arrangement and selection based problems, distribution and division Probability: experiment, sample space, event, probability of occurrence of an event, bayes theorem, odds of an event, selection based problems, binomial distribution
Unit 13	Logical Venn diagram and set theory: Venn diagram based problems, concept of set theory Syllogism: all, some and none relations, related statements with Venn diagram
Unit 14	Data interpretation: basics of data interpretation, average and percentage, tabulation, bar graphs, pie charts, line graphs

READINGS:

1. QUANTITATIVE APTITUDE FOR COMPETITIVE EXAMINATIONS by Dr. R S AGGARWAL, S CHAND PUBLISHING
2. A MODERN APPROACH TO VERBAL & NON-VERBAL REASONING by Dr. R S AGGARWAL, S CHAN PUBLISHING

4. ANALYTICAL REASONING by M.K. PANDEY, BANKING SERVICE CHRONICLE

Course Code	DEPEA516	Course Title	ANALYTICAL SKILLS-II
--------------------	-----------------	---------------------	-----------------------------

WEIGHTAGES	
CA	ETE(Th.)
30	70

Course Outcomes: Through this course, students will be able to
C01: apply logical reasoning to understand, interpret and handle different situations.
C02: solve efficiently the company specific logical reasoning tests.
C03: apply logical reasoning to prioritize and manage time.
C04: decide to build the logic
C05: examine the problem and handle it
C06: apply the logics

Unit No.	Contents
Unit- 1	Time and Work: chain rule, computation of work done together, men, women, children-based problems, wages-based work problems, alternate day work
Unit- 2	Pipes and Cisterns: inlet-outlet, part of tank filled, time-based problems, alternate work
Unit- 3	Time and Distance: concept of time speed and distance, conversion of Units, average speed concept, different types of problems
Unit- 4	Problem on trains: relative speed concept, faster and slower train, Boats and streams and races: downstream and upstream, linear and circular track
Unit- 5	Sequence and series completion: series completion, analogy, classification, arithmetic and geometric progression
Unit- 6	Alphabet test and logical sequence of words: alphabetical order of words, letter-word problems, rule detection, alphabetical quibble, word formation by unscrambling letters, word formation using Letters of a given word, alpha-numeric sequence puzzle, logical sequence of words
Unit- 7	Coding-Decoding: letter coding, number/symbol coding, substitution, matrix coding, mixed letter coding, mixed number coding
Unit- 8	Simple interest: basics of principal, rate and time, rate computation, time computation, amount computation
Unit- 9	Compound interest: concept of simple and compound interest, questions based on relation between compound and simple interest
Unit- 10	Calendar: calculating odd days, basic concept of calendar, finding the exact day
Unit- 11	Clocks: concept of clock, angle computation, facts Insert the missing character: set of figures, set of arrangements, set of matrix
Unit- 12	Data sufficiency: check sufficiency of data to answer the given questions Coding inequalities: basic operations, rules of inequalities, coded relations
Unit- 13	Puzzle test: seating/placing arrangements, comparison type questions, sequential order of things, family-based problems
Unit- 14	Non-Verbal Reasoning: series of figures, analogy of figures, classification of figures

READINGS:

1. QUANTITATIVE APTITUDE FOR COMPETITIVE EXAMINATIONS by DR. R S AGGARWAL, S CHAND PUBLISHING
2. A MODERN APPROACH TO VERBAL & NON-VERBAL REASONING by DR. R S AGGARWAL, S CHAND PUBLISHING

4. ANALYTICAL REASONING by M.K. PANDEY, BANKING SERVICE CHRONICLE

Course Code	DECAP538	Course Title	ALGORITHM DESIGN AND ANALYSIS		
			WEIGHTAGES		
			CA	ETE(Th.)	ETE (Pr.)
			30	40	30

Course Outcomes: Through this course, students will be able to

C01: perceive the need of different algorithm design techniques

C02: design and implement algorithms using divide and conquer, greedy approach, dynamic programming and backtracking

C03: apply specific algorithms for solving computational problems like pattern matching, minimum spanning tree and shortest-path problems

C04: analyze the asymptotic performance of algorithms

Unit No.	Content
Unit-1	Introduction: elementary data structures, basic computational models, analysis of algorithms: best case, average case and worst-case behaviour, asymptotic notations: big O notation, recursion, recurrence relations to analyse recursive algorithms
Unit-2	Divide and conquer: general method, binary search, merge sort, quick sort, and arithmetic with large integers.
Unit-3	Greedy method: General Method, Knapsack problem, Minimal Spanning Trees - Prim's and Kruskal's algorithm, single source shortest paths
Unit-4	Dynamic programming: general method, chained matrix multiplication, optimal storage on tapes
Unit-5	More on Dynamic programming: all-pairs shortest paths, optimal binary search trees
Unit-6	Backtracking: general method, the 8-queens problem, graph coloring, Hamiltonian cycles
Unit-7	Branch and bound: general method, 0/1 knapsack problem, travelling salesperson
Unit-8	Pattern matching: design of algorithms for pattern matching problems: brute force, knuth-morris-pratt, boyer moore algorithms
Unit-9	Huffman coding and data compression problems
Unit-10	Lower bound theory: comparison tree, oracles and adversary arguments
Unit-11	More on lower bound theory: lower bounds through reductions
Unit-12	Approximation: approximation basics, task scheduling, bin packing
Unit-13	Intractable problems: basic concepts, non-deterministic algorithms, NP completeness
Unit-14	More on intractable problems: examples of NP-hard and NP-complete problems, cook's theorem, problem reduction

LABORATORY WORK:

Implementation of algorithm design and analysis concepts (Divide and conquer, greedy method, dynamic programming, back tracking, branch and bound, pattern matching, lower bound theory, intractable problems)

READINGS:

1. FUNDAMENTALS OF COMPUTER ALGORITHMS by E. HOROWITZ AND S. SAHANI, GALGOTIA PUBLICATIONS
2. DESIGN AND ANALYSIS OF ALGORITHMS by HIMANSHU B. DAVE, PEARSON
3. DESIGN & ANALYSIS OF ALGORITHMS by R.C.T. LEE, MCGRAW HILL EDUCATION
4. DESIGN AND ANALYSIS OF COMPUTER ALGORITHMS by JOHN E. HOPCROFT, ADDISON-WESLEY

Course Code	DECAP951	Course Title	SOFTWARE PROJECT MANAGEMENT
--------------------	-----------------	---------------------	------------------------------------

WEIGHTAGES	
CA	ETE(Th.)
30	70

Course Outcomes: Through this course, students will be able to

CO1: apply python libraries for data analysis and machine learning model development

CO2: evaluate important features from a given dataset

CO3: apply machine learning models for real world problems

CO4: evaluate the performances of different machine learning models

Unit No.	Contents
Unit- 1	Introduction to Software Project Management: what is project? software project vs. other types, activities by software project mgt. plans, methods and methodologies, problems with software projects
Unit- 2	Step Wise Project Planning: project scope, objectives, infrastructure, characteristics, effort estimation, risk identification.
Unit- 3	Program Management & Project Evaluation: meaning, managing allocation of resources, creating program, individual projects, technical assessment, cost benefit analysis & risk evaluation
Unit- 4	Project Approach: intro, technical plan, choice of process models: waterfall, v-process, spiral, Prototyping, incremental delivery
Unit- 5	Effort Estimation: meaning, problems with estimation, basis, estimation techniques, Albrecht function point analysis, functions mark ii, COCOMO Model
Unit- 6	Activity Planning: objectives, project schedule, network planning model, time dimension, identifying critical path
Unit- 7	Risk Management: categories of risk, identification. assessment, schedule risk, applying pert technique
Unit- 8	Resource Allocation: identifying resource requirements, scheduling resources, publishing the resource schedule & cost schedule, scheduling sequence
Unit- 9	Monitoring & Control: creating frameworks, data collection, visualizing progress, cost monitoring, change control
Unit- 10	Software Quality: introduction, defining software quality, ISO 9126, software measures, product vs. process quality management, external standards
Unit- 11	Small Projects: introduction, problems with student projects, content of project plan
Unit- 12	Software configuration management: SCM, managing contracts, types of contracts, stages In contract placement, contract management and acceptance
Unit- 13	People Management: understanding behavior, organizational behavior, selecting the right person for the job, selecting the right person for the job
Unit- 14	Organization and team structures: decision making, leadership, organizational structures, stress health and safety, ISO and CMMI models, overview of project management tools

LABORATORY WORK:

1. Creating an activity schedule for a project.
2. Setting up resources.
3. Assigning resources to tasks.
4. Create a baseline.
5. Track plan by specific date.
6. Track plan as % complete.
7. Viewing critical path in a project.
8. Resolve resource over allocation.
9. Leveling over allocated resources.
10. Checking plan's cost.

READINGS:

1. SOFTWARE PROJECT MANAGEMENT by BOB HUGHES, MIKE COTTERELL, RAJIB MALL, MCGRAW HILL
2. SOFTWARE PROJECT MANAGEMENT IN PRACTICES by PANKAJ JALOTE, PEARSON
3. SOFTWARE PROJECT MANAGEMENT: A UNIFIED FRAMEWORK by WALKER ROYCE, PEARSON

Course Code	DEMGN581	Course Title	ORGANISATIONAL BEHAVIOUR AND HUMAN RESOURCE DYNAMICS
			WEIGHTAGES
			CA
			ETE(Th.)
			30
			70

Course Outcomes: Through this course, students will be able to

C01: enumerate the concept of management practices and organizational behavior

C02: develop and sharpen acumen of how different management thoughts can be used to improve organization functioning

C03: analyze the importance of management practices and important organizational behavior dimensions at different levels of organization

C04: appraise the dynamics of industrial relations and to manage them as per statutory regulations

C05: apply human resource management functions to handle emerging issues

Unit No.	Content
Unit-1	Organizational behavior: relationship between management and organization behavior, model of OB and contributing disciplines to the OB field Foundations of individual behavior: values, attitude and job satisfaction, theories of learning and behavior modification
Unit-2	Personality: theories of personality and its assessment, transactional analysis and attribution theory of perception Emotions: emotional intelligence and affective events theory of emotion Motivation: early and contemporary theories of motivation
Unit-3	Group dynamics: group dynamics and its significance, types of groups, formation and stages of group development, group performance factors Team development: team formation, its types and difference between group and team
Unit-4	Organizational conflict and negotiations: conflict sources, types and levels of conflict, traditional and modern approaches to conflict, resolution of conflict through negotiation Stress: sources and consequences of stress, stress management techniques
Unit-5	Introduction: External and Internal Forces of environment affecting HRM, Objectives and functions of HRM. Human Resource Planning: HRP process, Barriers and Prerequisites for Successful HRP.
Unit-6	Job Analysis: Methods of Collecting Job Data, Potential Problems with Job Analysis, Process of Job Analysis, Job Design and its approaches,
Unit-7	Recruitment & Selection: Meaning, Recruitment process, Recruitment Methods, Challenges in India and Selection Process
Unit-8	Talent Management: talent management, talent retention, talent acquisition and sources of talent acquisition Orientation, induction and placement: process of orientation, induction and placement programme, Evaluation of Orientation Programme
Unit-9	Training and Development: employee training, difference in training and development, methods of training, methods of management development, people capability maturity model
Unit-10	Career planning and management: career management, process of career planning, challenges in career planning.
Unit-11	Performance management system: performance management, performance planning, performance appraisal, potential appraisal, feedback and counselling.
Unit-12	Compensation management: types and theories of compensation, concept of wages,

	factors influencing compensation management, incentives and fringe benefits, employee engagement and retention.
Unit-13	Managing industrial relations: major actors and their roles in IR, factors influencing IR, approaches to IR, grievance handling procedure
Unit-14	Industrial Disputes: industrial disputes, methods of settlement of industrial disputes, trade unions and their challenges in India

READINGS:

1. ORGANIZATIONAL BEHAVIOUR by STEPHEN P. ROBBINS. TIMOTHY A. JUDGE. NEHARIKA VOHRA, PEARSON MANAGEMENT by STEPHEN P. ROBBINS. MARY COULTER. NEHARIKA VOHRA, PEARSON
2. HUMAN RESOURCE MANAGEMENT by DESSLER, G. AND VARKKEY, B, PEARSON

Course Code	DEMKT503	Course Title	MARKETING MANAGEMENT	
			WEIGHTAGES	
			CA	ETE(Th.)
			30	70

Course Outcomes: Through this course, students will be able to

CO1: analyze and respond to environmental and competitive changes, their impact on marketing planning, strategies and practices

CO2: apply the conceptual frameworks, theory and techniques to various marketing contexts

CO3: prepare marketing and sales plan appropriate to the needs of customers and contexts

CO4: determine strategies for developing new products and services that are consistent with evolving market needs

Unit No.	Content
Unit-1	Introduction: market and marketing, definition, nature and scope of marketing, exchange process, functions of marketing, core marketing concepts
Unit-2	Marketing orientations: evolution of modern marketing concept, holistic marketing concepts, new marketing orientations selling vs. marketing
Unit-3	Marketing mix: 7 P's & 7 C's of Marketing, 4 A's of Marketing, customer quality, value and satisfaction, Michael E. Porters chain analysis model
Unit-4	Marketing environment: Significance of scanning marketing environment; Analysis of macro environment of marketing – economic, demographic, socio-cultural, technological, political legal and ecological; Impact of micro and macro environment on marketing decisions
Unit-5	Consumer behaviour: buyer behaviour, different consumer roles, need for studying buyer behaviour, different buying motives, consumer buying decision process and influences, consumer vs. business buying behaviour, industrial buying process
Unit-6	Segmentation decisions: market segmentation, characteristics of a segment, bases for segmenting a consumer market, levels of market segmentation, factors influencing selection of market segments
Unit-7	Targeting and positioning: Benefits of market segmentation; Criteria for effective market segmentation; Target market selection and strategies; Positioning – concept, bases and process
Unit-8	Product decisions: concept and classification, layers of products, major product decisions, product-mix, new product development stages, packaging and labelling, product life cycle (PLC) – concept and appropriate strategies adopted at different stages
Unit-9	Pricing decisions: pricing – objectives, price sensitivity, factors affecting price of a product, pricing methods and strategies, ethical issues in product and pricing decisions
Unit-10	Distribution planning: channels of distribution – concept and importance, different types of distribution middlemen and their functions, selection, motivation and performance appraisal of distribution middlemen
Unit-11	Distribution decisions: decisions involved in setting up the channel, channel management strategies, distribution logistics – concept, importance and major logistics decisions, channel integration and systems, ethical issues in distribution decisions
Unit-12	Distribution decisions: retailing and wholesaling, types of retail formats, retail theories, retailing strategies, non-Store retailing, wholesaling – nature and importance, types of wholesalers, developments in retailing and wholesaling in indian perspective

Unit-13	Promotion decisions: role of promotion in marketing, promotion mix, integrated marketing communication, concept, communication process and promotion, determining promotion mix, factors influencing promotion mix, developing promotion campaigns, sales promotion, direct marketing, public relations, digital and social media
Unit-14	Trends in marketing: service Marketing, e-marketing, green marketing, customer relationship management, rural marketing, other emerging trends, ethical issues in marketing

READINGS:

1. KOTLER, P. & KELLER, K. L. (2017). MARKETING MANAGEMENT. PEARSON
2. MCCARTHY, E. J., CANNON, J. & PERREAULT, W. (2014). BASIC MARKETING. MCGRAW-HILL EDUCATION
3. ETZEL, M. J., WALKER, B. J., STATON, W. J., & PANDIT, A. (2010).MARKETING CONCEPTS AND CASES. TATA MCGRAW HILL

Course Code	DEFIN542	Course Title	CORPORATE FINANCE	
			WEIGHTAGES	
			CA	ETE(Th.)
			30	70

Course Outcomes: Through this course, students will be able to

CO1: understanding finance function with respect to its evolution and growth

CO2: understanding the concept of Time Value of Money and interpreting the results based on calculations.

CO3: analyzing financing needs of the businesses and designing an optimum capital structure

CO4: understanding the retention and distribution of profits and impact on business valuation.

Unit No.	Content
Unit-1	Financial Management: An Overview, evolution of finance, the basic goal: creating shareholder value, agency issues, business ethics and social responsibility
Unit-2	Sources of Finance: Long term and Short-term sources of finance- Ordinary shares, Preferences shares, redeemable irredeemable debentures, Debt vs. Equity.
Unit-3	Money Market Instruments: Treasury Bills, Commercial Papers, Certificate of Deposits, Treasury Management and Treasury Operations in corporate. External Commercial Borrowings, Financing for MSMEs
Unit-4	Time Value of Money concept: Compounding and discounting, Future value and Present value, Annuities, Effective interest rates
Unit-5	Investment Decisions: Capital Budgeting Decisions, Rationale of Capital Budgeting, Non- Discounting Capital Budgeting Techniques - Payback period, Profitability Index, Accounting Rate of Return
Unit-6	Investment Decisions: Discounting Techniques of Capital Budgeting - NPV, IRR, Discounting Payback Period Method, Estimation of Cash Flows, NPV v/s IRR, Risk analysis in Capital Budgeting - Sensitivity Analysis, Certainty Equivalent Approach
Unit-7	Cost of Capital: Meaning and Concept, Cost of Debt, Cost of Equity, Cost of Retained Earnings, Calculation of WACC, International Dimensions in Cost of Capital
Unit-8	Financing Decisions: Capital Structure, Theories and Value of the firm - Net Income Approach, Net Operating Income Approach, Traditional Approach, Modigliani Miller Model, Determining the optimal Capital Structure, Checklist for Capital Structure Decisions, Costs of Bankruptcy and Financial Distress.
Unit-9	EBIT-EPS Analysis: Concept of Leverage, Types of Leverage: Operating Leverage, Financial Leverage, Combined Leverage.
Unit-10	Dividend Decisions: Factors determining Dividend Policy, Theories of Dividend Gordon Model, Walter Model, MM Hypothesis
Unit-11	Forms of Dividend: Cash Dividend, Bonus Shares, Stock Split, Stock Repurchase, Dividend Policies in practice.
Unit-12	Working Capital Management: Working Capital Policies, Risk-Return trade-off, Cash management, Receivables management
Unit-13	Corporate Governance: Value-based Corporate culture, Disclosures, transparency and accountability, Corporate Governance and Human Resource Management, Evaluation of performance of board of directors, Succession planning, Public sector undertakings and corporate governance, Insider trading, Lessons from corporate failure

Unit-14	Economic outlook and Business Valuation: Impact of changing business environment on corporate valuation, climate change and corporate valuation, Business sustainability and corporate valuation, Role of environmental, social, and governance (ESG) factors in corporate valuation
----------------	---

READINGS:

1. FUNDAMENTALS OF CORPORATE FINANCE by JONATHAN BERK, PETER DeMARZO & JARRED HARDFORD, PEARSON
2. CORPORATE FINANCE by STEPHEN A. ROSS, RANDOLPH W. WESTERFIELD & JEFFREY JAFFE, MCGRAW HILL

Course Code	DEMGN578	Course Title	INTERNATIONAL BUSINESS ENVIRONMENT	
			WEIGHTAGE	
			CA	ETE(Th.)
			30	70

Course Outcomes: Through this course, students will be able to

C01: analyze business environment and trends to take decisions with respect to international business operations

C02: interpret and apply international trade theories in international business operations

C03: identify and critically analyse the role of foreign exchange market and usage of fundamental instruments for currency exchange

C04: develop skills on analysing the business data, and problem solving in other functional areas such as marketing, business strategy and human resources

C05: develop responsiveness to contextual social issues/ problems and exploring solutions, understanding business ethics and resolving ethical dilemmas

C06: identify aspects of the global business and cross-cultural understanding

Unit No.	Content
Unit 1	Overview of international business environment: Introduction to international business, types of international business, globalization and international Business;
Unit 2	Components of international Business environment: social environment, political and legal environment, economic environment, technological environment
Unit 3	The external environment and challenges: assessing risk in international business, Recent world trade and foreign Investment trends, environment Influence on Trade and investment patterns
Unit 4	International Trade theories: theory of absolute advantage, theory of comparative advantage, factor proportion theory, the diamond model of national competitive advantage, factor mobility theory
Unit 5	Protectionism and trading environment: Globalization trends and challenges; environment for foreign trade and investment, governmental influence on trade and investments; tariff and non-tariff barriers
Unit 6	Economic Integration and Co-operation: cross national cooperation and agreements, Role of international organizations: WTO, IMF, Regional Economic Integrations
Unit 7	International financial markets: foreign exchange market mechanism, exchange rate arrangement, determinants of exchange Rates, exchange rate movements and their impact
Unit 8	Global Debt and Equity Markets: Euro Currency market, offshore financial centres, International Banks, Non-Banking Financial service firms; stock markets
Unit 9	Global Competitiveness: Export Management, Technology and global Competition, world economic growth and the environment
Unit 10	Internationalization strategies: Theories of internationalization, Modes of operations in International Business, export and import strategy
Unit 11	Forms and Ownership of Foreign Production: Types of collaborative arrangements;

	Licensing, joint ventures & consortium approaches, Managing International Collaborations
Unit 12	International business diplomacy: Negotiating an International business, issues in asset protection, Multilateral sentiments
Unit 13	Country evaluation and selection: Opportunity and risk matrix, analysis of Macro and micro indicators, country comparison tools
Unit 14	Globalization and society: globalization with social responsibility, Ethical Dimensions of Labor Conditions, Ethics and the Environment, legislation for anti-competitive and unfair trade practices

READINGS:

1. DANIELS, RADEBAUGH, SULLIVAN & SALWAN, INTERNATIONAL BUSINESS ENVIRONMENTS AND OPERATIONS by PEARSON
2. INTERNATIONAL BUSINESS - COMPETING IN THE GLOBAL MARKETPLACE by CHARLES W HILL, ARUN KUMAR JAIN, MCGRAW HILL

Course Code	DEMKT509	Course Title	CONSUMER BEHAVIOR	
			WEIGHTAGES	
			CA	ETE(Th.)
			30	70

Course Outcomes: Through this course, students will be able to

C01: understand the implications of consumer behaviour concepts & theories for businesses and wider society.

C02: discern how individuals and groups influence consumer behaviour, and how marketers utilize this knowledge to help achieve organizational objectives.

C03: analyse the dynamic interplay of internal and external factors influencing consumer behaviour and accordingly develop a marketing strategy.

C04: articulate practical and comprehensive managerial understanding of consumer behaviour.

C05: develop the understanding of marketing regulation, consumer protection act and contemporary issues in consumer behaviour.

Unit No.	Content
Unit 1	Consumer Behaviour and Marketing strategy: consumer behaviour, market strategy and applications of consumer behaviour.
Unit 2	Market Analysis and Consumer Decisions: market analysis components, segmentation strategy and consumer decisions and consumer behaviour models.
Unit 3	Culture and Group influence: cultural and group influence on consumer behaviour, concept of culture, cross cultural marketing strategy, the household life cycle and marketing strategy.
Unit 4	Groups, Reference Group and Diffusion of Innovation: groups, types of groups, reference group influence on consumption process & marketing strategies and diffusion of innovation.
Unit 5	Perception: perception, exposure, attention and interpretation, perception and marketing strategy.
Unit 6	Learning and Personality: memory's role in learning, learning theories, brand image and product positioning, brand equity and brand leverage motivation, personality and emotion.
Unit 7	Motivation and Emotion: motivation theory and marketing strategy use of personality in marketing practice, emotions and marketing strategy.
Unit 8	Attitude and Market Segmentation: attitude, influencing attitude, attitude components and change strategies, market segmentation and product development strategies based on attitudes.

Course Code	DEMGN801	Course Title	BUSINESS ANALYTICS	
			WEIGHTAGES	
			CA	ETE(Th.)
			30	70

Course Outcomes: Through this course, students will be able to

CO1: apply quantitative modelling and data analysis techniques to problems of real world

CO2: employ best practices in data visualization to develop charts, maps, tables, and other visual Representations techniques to communicate findings to diverse audiences

CO3: identify and describe complex business problems in terms of analytical models

CO4: apply appropriate analytical methods to find solutions to business problems that achieve stated Objective

Unit No.	Content
Unit 1	Business analytics and summarizing business data: Overview of business analytics: scope, application, R-studio environment for business analytics, basics of R: packages, vectors, datatypes and data structures
Unit 2	Summarizing business data: One variable and two variables statistics, concept of pipes operator, functions to summarize variables: select, filter, mutate, arrange, summarize and group by
Unit 3	Business data visualization: Basic graphs: bar-graph, line-chart, histogram, box and scatterplot, advanced data visualization: graphics for correlation, deviation, ranking, distribution and composition
Unit 4	Business forecasting using time series: Time series modelling, exploration of time series data using R, ARIMA, GARCH, VAR methodologies for time series analysis
Unit 5	Business prediction using generalised linear models: Logistic regression and statistical inference with application, survival analysis and its application
Unit 6	Machine learning for businesses: Supervised models: K-NN and decision trees, unsupervised models: K-means and hierarchical clustering, classification and prediction accuracy
Unit 7	Text analytics for business: Creating and refining text data, inferences through graphs, topic modelling and TDM analysis, sentiment analysis
Unit 8	Business intelligence: Introduction to business intelligence, role of data and data base management, role of data mining in business strategy
Unit 9	Data visualization: Role of visualization in business intelligence, introduction to charts, graphs and maps
Unit 10	Data environment and preparation: Managing metadata, extracts and live data, cross database joints and union
Unit 11	Data blending: Data prep with text and excel files, understating data types, extracting data from various file formats
Unit 12	Design fundamentals and visual analytics: Filters, sorting, groups and sets, interactive filters, forecasting, use of tooltip, reference line, parameter, drill down and hierarchies
Unit 13	Decision analytics and calculations: Types of calculations, logic calculations (including if comment, nested if command etc.), data calculations, string calculations

Unit 14	Mapping: Role of maps in business intelligence and visualization, editing unrecognized locations

Course Code	DEOPR639	Course Title	OPERATIONS MANAGEMENT AND RESEARCH
--------------------	-----------------	---------------------	---

WEIGHTAGES	
CA	ETE(Th.)
30	70

Course Outcomes: Through this course, students will be able to

CO1: analyze how to optimally utilize the resources.

CO2: apply the concepts in solving real life problems.

CO3: adapt different opinions and make correct judgment.

CO4: select right decision-making tools.

Unit No.	Contents
Unit- 1	Introduction to Operations Management: introduction and scope of operation management, production of goods versus delivery of services, product-process matrix
Unit- 2	Forecasting: introduction, features and elements of forecasting, forecast based on judgment and opinion, forecast based on time- series data, associative forecasting techniques, concept of forecasting errors
Unit- 3	Product and service design: design process, product design, service design
Unit- 4	Process selection and facility layout: introduction, process types, product and service profiling, automation, facility layout, line balancing
Unit- 5	Location planning and analysis: need and nature of location decisions, factors that affect location decisions, evaluating location alternatives
Unit- 6	Management of quality: defining quality-dimensions of quality, determinants of quality, the cost of quality, quality tools, total quality management
Unit- 7	Quality control: inspection, control charts for variables (mean and range chart), control charts for attributes (p-chart, c-chart), run test
Unit- 8	Inventory management: nature and importance of inventories, inventory counting systems and inventory costs, economic production quantity, quantity discounts, EOQ model
Unit- 9	Buying and sourcing in e-commerce: definition e-sourcing and e- buying, typical e- sourcing cycle, barriers to successful e-sourcing deployment and how to overcome them, benefits of e-sourcing
Unit- 10	Planning: Aggregate Production Planning; Master Production Schedule and MRP, MRP-II, ERP
Unit- 11	Maintenance: Preventive maintenance, Breakdown maintenance, Replacement
Unit- 12	Supply chain management: need, elements and benefit of effective SCM, logistics and reverse logistics, requirements and steps for creating an effective supply chain, lean vs. agile supply chains
Unit- 13	JIT and lean operations: goals and building blocks of lean systems
Unit- 14	Emerging issues in operations management: Sustainable Operations Management, Trends in Operations Management
